Optical Networks Architecture And Survivability:

Optical Networks Hussein T. Mouftah, Pin-Han Ho, 2003 Special emphasis has been given to the design of meshed middle sized and wavelength routed networks with dynamic traffic in the optical domain such as the next generation Metropolitan Area Network

Path Routing in Mesh Optical Networks Eric Bouillet, Georgios Ellinas, Jean-Francois Labourdette, Ramu Ramamurthy, 2007-10-24 Transport networks evolved from DCS Digital Cross connect Systems based mesh architectures to SONET SDH Synchronous Optical Networking Synchronous Digital Hierarchy ring architectures in the 1990 s In the past few years technological advancements in optical transport switches have allowed service providers to support the same fast recovery in mesh networks previously available in ring networks while achieving better capacity efficiency and resulting in lower capital cost Optical transport networks today not only provide trunking capacity to higher layer networks such as inter router connectivity in an IP centric infrastructure but also support efficient routing and fast failure recovery of high bandwidth services This is possible due to the emergence of optical network elements that have the intelligence required to efficiently control the network Optical mesh networks will enable a variety of dynamic services such as bandwidth on demand Just In Time bandwidth bandwidth scheduling bandwidth brokering and optical virtual private networks that open up new opportunities for service providers and their customers alike Path Routing in Mesh Optical Networks combines both theoretical as well as practical aspects of routing and dimensioning for mesh optical networks All authors have worked as technical leaders for the equipment vendor Tellium who implemented such capabilities in its product and whose product was deployed in service provider networks Path Routing in Mesh Optical Networks Presents an in depth treatment of a specific class of optical networks i e path oriented mesh optical networks Focuses on routing and recovery dimensioning performance analysis and availability in mesh optical networks Explains and analyses routing specifically associated with Dedicated Backup Path Protection DBPP and Shared Backup Path Protection SBPP recovery architectures As most of the core backbone networks evolve to mesh topologies utilizing intelligent network elements for provisioning and recovery of services Path Routing in Mesh Optical Networks will be an invaluable tool for both researchers and engineers in the industry who are responsible for designing developing deploying and maintaining mesh optical networks It will also be a useful reference book for graduate students and university professors who are interested in optical networks or telecommunications networking With a foreword by Professor Wayne D Grover author of the book Mesh Based Survivable Networks

Optical Network Design and Management Xiaomin Ren,Tomonori Aoyama,2001 *End-to-End Quality of Service* Abdelhamid Mellouk,2013-03-01 A modern communication network can be described as a large complex distributed system composed by higher interoperating smaller sub systems Today the proliferation and convergence of different types of wired wireless and mobile networks are crucial for the success of the next generation networking However these networks can hardly meet the requirements of future integrated service networks and are expected to carry multimedia traffic with various Quality of Experience QoE and Quality of Service QoS requirements Providing all relevant QoS QoE issues in these heterogeneous networks is then an important challenge for telecommunication operators manufacturers and companies The impressive emergence and the important demand of the rising generation of real time Multi service such as Data Voice VoD Video Conference etc over communication heterogeneous networks require scalability while considering a continuous QoS This book presents and explains all the techniques in new generation networks which integrate efficient global control mechanisms in two directions 1 maintain QoS requirements in order to maximize network resources utilization and minimize operational costs on all the types of wired wireless mobile networks used to transport traffic and 2 mix the QoS associated with home access and core networks in order to provide Quality of Service Quality of Experience expected by users of new services
