

Fundamental principles of optical computing

Optical computing harnesses the light-based logic gate, a photonic circuit, and a photonic processor to replace conventional binary memory of the movement of electrons.

- ① Photon advantage of light, antennas of optical antennas integrated on a single substrate

- ② Formation of photons is barrierless...

- ③ Optical data storage, photonic integrated optical interconnection on conventional system will be in the existing materials without issue,

- ④ Photonics data nonrepelling, possible data input, data output, and data processing, faster or faster, data about range of motion alone
