Ontology Learning For The Semantic Web:

Ontology Learning for the Semantic Web Alexander Maedche,2012-12-06 Ontology Learning for the Semantic Web explores techniques for applying knowledge discovery techniques to different web data sources such as HTML documents dictionaries etc in order to support the task of engineering and maintaining ontologies The approach of ontology learning proposed in Ontology Learning for the Semantic Web includes a number of complementary disciplines that feed in different types of unstructured and semi structured data This data is necessary in order to support a semi automatic ontology engineering process Ontology Learning for the Semantic Web is designed for researchers and developers of semantic web applications It also serves as an excellent supplemental reference to advanced level courses in ontologies and the semantic web

Perspectives on Ontology Learning J. Lehmann,J. Völker,2014-04-03 Perspectives on Ontology Learning brings together researchers and practitioners from different communities natural language processing machine learning and the semantic web in order to give an interdisciplinary overview of recent advances in ontology learning Starting with a comprehensive introduction to the theoretical foundations of ontology learning methods the edited volume presents the state of the start in automated knowledge acquisition and maintenance It outlines future challenges in this area with a special focus on technologies suitable for pushing the boundaries beyond the creation of simple taxonomical structures as well as on problems specifically related to knowledge modeling and representation using the Web Ontology Language Perspectives on Ontology Learning is designed for researchers in the field of semantic technologies and developers of knowledge based applications It covers various aspects of ontology learning including ontology quality user interaction scalability knowledge acquisition from heterogeneous sources as well as the integration with ontology engineering methodologies Ontology Learning and Population from Text Philipp Cimiano,2006-12-11 In the last decade ontologies have received much attention within computer science and related disciplines most often as the semantic web Ontology Learning and Population from Text Algorithms Evaluation and Applications discusses ontologies for the semantic web as well as knowledge management information retrieval text clustering and classification as well as natural language processing Ontology Learning and Population from Text Algorithms Evaluation and Applications is structured for research scientists and practitioners in industry This book is also suitable for graduate level students in computer science

Ontology Learning and Population: Bridging the Gap Between Text and Knowledge P. Buitelaar,P. Cimiano,2008-01-31 The promise of the Semantic Web is that future web pages will be annotated not only with bright colors and fancy fonts as they are now but with annotation extracted from large domain ontologies that specify to a computer in a way that it can exploit what information is contained on the given web page The presence of this information will allow software agents to examine pages and to make decisions about content as humans are able to do now The classic method of building an ontology is to gather a committee of experts in the domain to be modeled by the ontology and to have this committee agree on which concepts cover the domain on which

terms describe which concepts on what relations exist between each concept and what the possible attributes of each concept are All ontology learning systems begin with an ontology structure which may just be an empty logical structure and a collection of texts in the domain to be modeled An ontology learning system can be seen as an interplay between three things an existing ontology a collection of texts and lexical syntactic patterns The Semantic Web will only be a reality if we can create structured unambiguous ontologies that model domain knowledge that computers can handle The creation of vast arrays of such ontologies to be used to mark up web pages for the Semantic Web can only be accomplished by computer tools that can extract and build large parts of these ontologies automatically This book provides the state of art of many automatic extraction and modeling techniques for ontology building The maturation of these techniques will lead to the creation of the Semantic Web *Ontology learning for the semantic web* Jorge Rafael Gutiérrez Pulido, 2004 **Semantic Web**

Technologies John Davies, Rudi Studer, Paul Warren, 2006-05-01 The Semantic Web combines the descriptive languages RDF Resource Description Framework and OWL Web Ontology Language with the data centric customizable XML eXtensible Mark up Language to provide descriptions of the content of Web documents These machine interpretable descriptions allow more intelligent software systems to be written automating the analysis and exploitation of web based information Software agents will be able to create automatically new services from already published services with potentially huge implications for models of e Business Semantic Web Technologies provides a comprehensive overview of key semantic knowledge technologies and research The authors explain semi automatic ontology generation and metadata extraction in depth along with ontology management and mediation Further chapters examine how Semantic Web technology is being applied in knowledge management Semantic Information Access and in the next generation of Web services Semantic Web Technologies Provides a comprehensive exposition of the state of the art in Semantic Web research and key technologies Explains the use of ontologies and metadata to achieve machine interpretability Describes methods for ontology learning and metadata generation Discusses ontology management and evolution covering ontology change detection and propagation ontology dependency and mediation Illustrates the theoretical concepts with three case studies on industrial applications in digital libraries the legal sector and the telecommunication industry Graduate and advanced undergraduate students academic and industrial researchers in the field will all find Semantic Web Technologies an essential guide to the technologies of the Semantic Web *Learning Expressive Ontologies* J. Völker, IOS Press, 2009-06-25 This publication advances the state of the art in ontology learning by presenting a set of novel approaches to the semi automatic acquisition refinement and evaluation of logically complex axiomatizations It has been motivated by the fact that the realization of the semantic web envisioned by Tim Berners Lee is still hampered by the lack of ontological resources while at the same time more and more applications of semantic technologies emerge from fast growing areas such as e business or life sciences Such knowledge intensive applications requiring large scale reasoning over complex domains of interest even more than the

semantic web depend on the availability of expressive high quality axiomatizations This knowledge acquisition bottleneck could be overcome by approaches to the automatic or semi automatic construction of ontologies Hence a huge number of ontology learning tools and frameworks have been developed in recent years all of them aiming for the automatic or semi automatic generation of ontologies from various kinds of data However both the quality and the expressivity of ontologies that can be acquired by the current state of the art in ontology learning so far have failed to meet the expectations of people who argue in favor of powerful knowledge intensive applications based on logical inference This work therefore takes a first yet important step towards the semi automatic generation and maintenance of expressive ontologies

Applied Semantic Web Technologies Vijayan Sugumaran,Jon Atle Gulla,2011-08-10 The rapid advancement of semantic web technologies along with the fact that they are at various levels of maturity has left many practitioners confused about the current state of these technologies Focusing on the most mature technologies Applied Semantic Web Technologies integrates theory with case studies to illustrate the history current state and future direction of the semantic web It maintains an emphasis on real world applications and examines the technical and practical issues related to the use of semantic technologies in intelligent information management The book starts with an introduction to the fundamentals reviewing ontology basics ontology languages and research related to ontology alignment mediation and mapping Next it covers ontology engineering issues and presents a collaborative ontology engineering tool that is an extension of the Semantic MediaWiki Unveiling a novel approach to data and knowledge engineering the text Introduces cutting edge taxonomy aware algorithms Examines semantics based service composition in transport logistics Offers ontology alignment tools that use information visualization techniques Explains how to enrich the representation of entity semantics in an ontology Addresses challenges in tackling the content creation bottleneck Using case studies the book provides authoritative insights and highlights valuable lessons learned by the authors information systems veterans with decades of experience They explain how to create social ontologies and present examples of the application of semantic technologies in building automation logistics ontology driven business process intelligence decision making and energy efficiency in smart homes

Learning Ontology Relations by Combining Corpus-Based Techniques and Reasoning on Data from Semantic Web Sources Gerhard Wöhlgenannt,2011 The manual construction of formal domain conceptualizations ontologies is labor intensive Ontology learning by contrast provides semi automatic ontology generation from input data such as domain text This thesis proposes a novel approach for learning labels of non taxonomic ontology relations It combines corpus based techniques with reasoning on Semantic Web data Corpus based methods apply vector space similarity of verbs co occurring with labeled and unlabeled relations to calculate relation label suggestions from a set of candidates A meta ontology in combination with Semantic Web sources such as DBpedia and OpenCyc allows reasoning to improve the suggested labels An extensive formal evaluation demonstrates the superior accuracy of the presented hybrid approach

ontologies have received much attention within computer science and related disciplines most often as the semantic web Ontology Learning and Population from Text Algorithms Evaluation and Applications discusses ontologies for the semantic web as well as knowledge management information retrieval text clustering and classification as well as natural language processing Ontology Learning and Population from Text Algorithms Evaluation and Applications is structured for research scientists and practitioners in industry This book is also suitable for graduate level students in computer science

Ontology Learning and Population Paul Buitelaar, Philipp Cimiano, 2008 Handbook on Ontologies Steffen Staab, Rudi Studer, 2013-04-17 An ontology is a description like a formal specification of a program of concepts and relationships that can exist for an agent or a community of agents The concept is important for the purpose of enabling knowledge sharing and reuse The Handbook on Ontologies provides a comprehensive overview of the current status and future perspectives of the field of ontologies The handbook demonstrates standards that have been created recently it surveys methods that have been developed and it shows how to bring both into practice of ontology infrastructures and applications that are the best of their kind **Ontological Engineering** Asunción Gómez-Pérez, Mariano

Fernandez-Lopez, Oscar Corcho, 2006-04-18 Ontological Engineering refers to the set of activities that concern the ontology development process the ontology life cycle the methods and methodologies for building ontologies and the tool suites and languages that support them During the last decade increasing attention has been focused on ontologies and Ontological Engineering Ontologies are now widely used in Knowledge Engineering Artificial Intelligence and Computer Science in applications related to knowledge management natural language processing e commerce intelligent integration information

information retrieval integration of databases b informatics and education and in new emerging fields like the Semantic Web Primary goals of this book are to acquaint students researchers and developers of information systems with the basic concepts and major issues of Ontological Engineering as well as to make ontologies more understandable to those computer science engineers that integrate ontologies into their information systems We have paid special attention to the influence that ontologies have on the Semantic Web Pointers to the Semantic Web appear in all the chapters but specially in the chapter on ontology languages and tools

Ontology Learning and Knowledge Discovery Using the Web Mohammed Bennamoun,2011 This book provides relevant theoretical foundations and disseminates new research findings and expert views on the remaining challenges in ontology learning discussing artificial intelligence knowledge acquisition knowledge representation and reasoning text mining information extraction and ontology learning

Natural Language Processing for the Semantic Web Diana Maynard,Kalina Bontcheva,2016-12-13 This book introduces core natural language processing NLP technologies to non experts in an easily accessible way as a series of building blocks that lead the user to understand key technologies why they are required and how to integrate them into Semantic Web applications Natural language processing and Semantic Web technologies have different but complementary roles in data management Combining these two technologies enables structured and unstructured data to merge seamlessly Semantic Web technologies aim to convert unstructured data to meaningful representations which benefit enormously from the use of NLP technologies thereby enabling applications such as connecting text to Linked Open Data connecting texts to each other semantic searching information visualization and modeling of user behavior in online networks The first half of this book describes the basic NLP processing tools tokenization part of speech tagging and morphological analysis in addition to the main tools required for an information extraction system named entity recognition and relation extraction which build on these components The second half of the book explains how Semantic Web and NLP technologies can enhance each other for example via semantic annotation ontology linking and population These chapters also discuss sentiment analysis a key component in making sense of textual data and the difficulties of performing NLP on social media as well as some proposed solutions The book finishes by investigating some applications of these tools focusing on semantic search and visualization modeling user behavior and an outlook on the future
