Tabrizian, Helena Mitasova, 2018-05-11 This book provides an overview of the latest developments in the fast growing field of tangible user interfaces. It presents a new type of modeling environment where the users interact with geospatial data and simulations using 3D physical landscape model coupled with 3D rendering engine. Multiple users can modify the physical model while it is being scanned providing input for geospatial analysis and simulations. The results are then visualized by projecting images or animations back on the physical model while photorealistic renderings of human views are displayed on a computer screen or in a virtual reality headset. New techniques and software which couple the hardware set up with open source GRASS GIS and Blender rendering engine make the system instantly applicable to a wide range of applications in geoscience education landscape design computer games stakeholder engagement and many others. This second edition introduces a new more powerful version of the tangible modeling environment with multiple types of interaction including polymeric sand molding placement of markers and delineation of areas using colored felt patches. Chapters on coupling tangible interaction with 3D rendering engine and immersive virtual environment and a case study integrating the tools presented throughout this book demonstrate the second generation of the system Immersive Tangible Landscape that enhances the modeling and design process through interactive rendering of modeled landscape. This book explains main components of Immersive Tangible Landscape System and provides the basic workflows for running the applications. The fundamentals of the system are followed by series of example applications in geomorphometry hydrology coastal and fluvial flooding fire spread landscape and park design solar energy trail planning and others. Graduate and undergraduate students and educators in geospatial science earth science landscape architecture computer graphics and games natural resources and many others disciplines will find this book useful as a reference or secondary textbook. Researchers who want to build and further develop the system will most likely be the core audience but also anybody interested in geospatial modeling applications hazard risk management hydrology solar energy coastal and fluvial flooding fire spread landscape and park design will want to purchase this book. **Environment and Planning**, 2004 Journal of urban planning and design. Publishes research in the application of formal methods methods models and theories to spatial problems involving the built environment and the spatial structure of cities and regions. Includes the application of computers to planning and design in particular the use of shape grammars artificial intelligence and morphological methods to buildings and towns the use of multimedia and GIS in urban and regional planning and the development of ideas concerning the virtual city. The authors are all prominent experts in Open Source GIS in Italy and in many cases the international community. They are all professionals with involvement in training and scientific research and are highly motivated by their common goal of supporting Free Software. This is therefore an innovative undertaking in that it provides the user with immediate access to the software tools and to the numerous resources and documents described in the text and available via the Internet. The first

part of the book which is divided into nine chapters deals with describing reference systems and helping the user install the software packages on Microsoft Apple GNU Linux operating systems Subsequent chapters present the most important functionalities of well known software such as QGIS and GRASS GIS and describe ways of managing geographic data using relational database engines SpatiaLite Next a few examples and applications in landscaping geomorphology hydrology and geology are presented and the various online resources where users may obtain free help and support are described The book closes with a few remarks on advanced functionalities
