Operators And Function Theory:

   Operators and Function Theory S.C. Power,2012-12-06 In the modern study of Hilbert space operators there has been an increasingly subtle involvement with analytic function theory This is evident in the analysis of subnormal operators Toeplitz operators and Hankel operators for example On the other hand the operator theoretic viewpoint of interpolation by analytic functions is a powerful one There has been significant activity in recent years within these enriching interactions and the time seemed right for an overview ot the main lines of development The Advanced Study Institute Operators and Function Theory in Lancaster 1984 was devoted to this and this book contains ex panded versions and one contraction of the main lecture prog ramme These varied articles by prominent researchers include for example a survey of recent results on subnormal operators recent work of Soviet mathematicians on Hankel and Toeplitz operators expositions of the decomposition theory and inter polation theory for Bergman Besov and Bloch spaces with applic ations for special operators the Krein space approach to inter polation problems and much more It is hoped that these proceedings will bring all this lively mathematics to a wider audience Sincere thanks are due to the Scientific Committee of the North Atlantic Treaty Organisation for the generous support that made the institute possible and to the London Mathematical Society and the British Council for important additional support Warm thanks also go to Barry Johnson and the L M S for early guidance and to my colleague Graham Jameson for much organisational support   **Operators and Function Theory** S C Power,1985-04-30   *Operator Theory in Function Spaces* Kehe Zhu,2007 This book covers Toeplitz operators Hankel operators and composition operators on both the Bergman space and the Hardy space The setting is the unit disk and the main emphasis is on size estimates of these operators boundedness compactness and membership in the Schatten classes Most results concern the relationship between operator theoretic properties of these operators and function theoretic properties of the inducing symbols Thus a good portion of the book is devoted to the study of analytic function spaces such as the Bloch space Besov spaces and BMOA whose elements are to be used as symbols to induce the operators we study The book is intended for both research mathematicians and graduate students in complex analysis and operator theory The prerequisites are minimal a graduate course in each of real analysis complex analysis and functional analysis should sufficiently prepare the reader for the book Exercises and bibliographical notes are provided at the end of each chapter These notes will point the reader to additional results and problems Kehe Zhu is a professor of mathematics at the State University of New York at Albany His previous books include Theory of Bergman Spaces Springer 2000 with H Hedenmalm and B Korenblum and Spaces of Holomorphic Functions in the Unit Ball Springer 2005 His current research interests are holomorphic function spaces and operators acting on them   **Toeplitz Operators and Spectral Function Theory** N. Nikolsky,2013-12-01 The volume contains selected papers of the Spectral Function Theory seminar Leningrad Branch of Steklov Mathematical Institute The papers are mostly devoted to the theory of Toeplitz and model operators These subjects

are considered here from various points of view Several papers concern the relationships of Toeplitz operators to weighted polynomial approximation Namely two papers by B Solomyak and A Volberg intensively treat the problem of spectra multiplicity f r analytic Toeplitz operators which are in fact multiplication operators and my paper can serve as an introduction to the problem This theme of multiplicities is continued in a paper by V Vasyunin where the multiplicity of the spectrum is computed for Hilbert space contractions with finite defect indices V Peller s paper deals with a perturbation theory problem for Toeplitz operators In a paper by D Yakubovich a new similarity model for a class of Toeplitz operators is constructed S Treil presents a survey of a part of spectral function theory for vector valued function Szego Kolmogorov extreme prob ems for operator weights bases of vector rational functions estimations of Hilbert transform with respect to operator weights the operator corona problem As a concluding remark I dare only note that the whole collection convinces us once more without a doubt of the fruitfullness of the natural union of operator theory and complex analysis if at all the union of these fields is at all different from their intersection   Composition Operators on Spaces of Analytic Functions Jr. Cowen,Barbara I. MacCluer,2019-03-04 The study of composition operators lies at the interface of analytic function theory and operator theory Composition Operators on Spaces of Analytic Functions synthesizes the achievements of the past 25 years and brings into focus the broad outlines of the developing theory It provides a comprehensive introduction to the linear operators of composition with a fixed function acting on a space of analytic functions This new book both highlights the unifying ideas behind the major theorems and contrasts the differences between results for related spaces Nine chapters introduce the main analytic techniques needed Carleson measure and other integral estimates linear fractional models and kernel function techniques and demonstrate their application to problems of boundedness compactness spectra normality and so on of composition operators Intended as a graduate level textbook the prerequisites are minimal Numerous exercises illustrate and extend the theory For students and non students alike the exercises are an integral part of the book By including the theory for both one and several variables historical notes and a comprehensive bibliography the book leaves the reader well grounded for future research on composition operators and related areas in operator or function theory

   Analysis of Operators on Function Spaces Alexandru Aleman,Haakan Hedenmalm,Dmitry Khavinson,Mihai Putinar,2019-05-30 This book contains both expository articles and original research in the areas of function theory and operator theory The contributions include extended versions of some of the lectures by invited speakers at the conference in honor of the memory of Serguei Shimorin at the Mittag Leffler Institute in the summer of 2018 The book is intended for all researchers in the fields of function theory operator theory and complex analysis in one or several variables The expository articles reflecting the current status of several well established and very dynamical areas of research will be accessible and useful to advanced graduate students and young researchers in pure and applied mathematics and also to engineers and physicists using complex analysis methods in their investigations   **Recent Advances in Operator-Related Function**

Theory Alec L. Matheson,2006 The articles in this book are based on talks at a conference devoted to interrelations between function theory and the theory of operators The main theme of the book is the role of Alexandrov Clark measures Two of the articles provide the introduction to the theory of Alexandrov Clark measures and to its applications in the spectral theory of linear operators The remaining articles deal with recent results in specific directions related to the theme of the book

Complex Function Theory, Operator Theory, Schur Analysis and Systems Theory Daniel Alpay,Bernd Fritzsche,Bernd Kirstein,2020-09-19 This book is dedicated to Victor Emmanuilovich Katsnelson on the occasion of his 75th birthday and celebrates his broad mathematical interests and contributions Victor Emmanuilovich s mathematical career has been based mainly at the Kharkov University and the Weizmann Institute However it also included a one year guest professorship at Leipzig University in 1991 which led to him establishing close research contacts with the Schur analysis group in Leipzig a collaboration that still continues today Reflecting these three periods in Victor Emmanuilovich s career present and former colleagues have contributed to this book with research inspired by him and presentations on their joint work Contributions include papers in function theory Favorov Golinskii Friedland Goldman Yomdin Kheifets Yuditskii Schur analysis moment problems and related topics Boiko Dubovoy Dyukarev Fritzsche Kirstein M dler extension of linear operators and linear relations Dijksma Langer Hassi de Snoo Hassi Wietsma and non commutative analysis Ball Bolotnikov Cho Jorgensen **Toeplitz Operators and Spectral Function Theory** Nikolaĭ Kapitonovich Nikol'skiĭ,1989

Investigations in Linear Operators and Function Theory Nikolai K. Nikolski,1972 **Treatise on the Shift Operator** N.K. Nikol'skii,2012-12-06 This book is an elementary introduction to non classical spectral theory Mter the basic definitions and a reduction to the study of the functional model the discussion will be centered around the simplest variant of such a model which formally speaking comprises only the class of contraction operators with a one dimensional rank of non unitarity rank I T T rank I TT 1 The main emphasis is on the technical side of the subject the book being mostly devoted to a development of the analytical machinery of spectral theory rather than to this discipline itself The functional model of Sz Nagy and Foia re duces the study of general operators to an investigation of the compression T PSIK of the shift operator S Sf zf onto coinvariant subspaces i e subspaces in variant with respect to the adjoint shift S In the main body of the book the Lectures in the proper meaning of the word this operator acts on the Hardy space H2 and is itself a part of the operator of multiplication by the independent variable in the space L2 in the case at hand L2 means L2 lf If being the unit circle this operator again being fundamental for classical spectral theory **Hardy Classes and Operator Theory** Marvin Rosenblum,James Rovnyak,1997-01-01 Concise treatment focuses on theory of shift operators Toeplitz operators and Hardy classes of vector and operator valued functions Topics include general theory of shift operators on a Hilbert space use of lifting theorem to give a unified treatment of interpolation theorems of the Pick Nevanlinna and Loewner types more Appendix Bibliography 1985 edition *Applications of Functional Analysis and Operator Theory* V. Hutson,J. Pym,M.

Cloud,2005-02-08 Functional analysis is a powerful tool when applied to mathematical problems arising from physical situations The present book provides by careful selection of material a collection of concepts and techniques essential for the modern practitioner Emphasis is placed on the solution of equations including nonlinear and partial differential equations The assumed background is limited to elementary real variable theory and finite dimensional vector spaces Provides an ideal transition between introductory math courses and advanced graduate study in applied mathematics the physical sciences or engineering Gives the reader a keen understanding of applied functional analysis building progressively from simple background material to the deepest and most significant results Introduces each new topic with a clear concise explanation Includes numerous examples linking fundamental principles with applications Solidifies the reader s understanding with numerous end of chapter problems **Noncommutative Function-Theoretic Operator Theory and Applications** Joseph A. Ball,Vladimir Bolotnikov,2021-12-16 This concise volume shows how ideas from function and systems theory lead to new insights for noncommutative multivariable operator theory *Matrix Functions of Bounded Type: An Interplay Between Function Theory and Operator Theory* Raúl E. Curto,In Sung Hwang,Woo Young Lee,2019-09-05 In this paper the authors study matrix functions of bounded type from the viewpoint of describing an interplay between function theory and operator theory They first establish a criterion on the coprime ness of two singular inner functions and obtain several properties of the Douglas Shapiro Shields factorizations of matrix functions of bounded type They propose a new notion of tensored scalar singularity and then answer questions on Hankel operators with matrix valued bounded type symbols They also examine an interpolation problem related to a certain functional equation on matrix functions of bounded type this can be seen as an extension of the classical Hermite Fej r Interpolation Problem for matrix rational functions The authors then extend the H functional calculus to an H H functional calculus for the compressions of the shift Next the authors consider the subnormality of Toeplitz operators with matrix valued bounded type symbols and in particular the matrix valued version of Halmos s Problem 5 and then establish a matrix valued version of Abrahamse s Theorem They also solve a subnormal Toeplitz completion problem of 2 2 partial block Toeplitz matrices Further they establish a characterization of hyponormal Toeplitz pairs with matrix valued bounded type symbols and then derive rank formulae for the self commutators of hyponormal Toeplitz pairs *Topics in Operator Theory* Carl M. Pearcy,1974-12-31 Deals with various aspects of the theory of bounded linear operators on Hilbert space This book offers information on weighted shift operators with scalar weights **The Theory of Subnormal Operators** John B. Conway,1991 In a certain sense subnormal operators were introduced too soon because the theory of function algebras and rational approximation was also in its infancy and could not be properly used to examine the class of operators The progress in the last several years grew out of applying the results of rational approximation from the Preface This book is the successor to the author s 1981 book on the same subject In addition to reflecting the great strides in the development of subnormal operator theory since the first book the present work is oriented

towards rational functions rather than polynomials Although the book is a research monograph it has many of the traits of a textbook including exercises The book requires background in function theory and functional analysis but is otherwise fairly self contained The first few chapters cover the basics about subnormal operator theory and present a study of analytic functions on the unit disk Other topics included are some results on hypernormal operators an exposition of rational approximation interspersed with applications to operator theory a study of weak star rational approximation a set of results that can be termed structure theorems for subnormal operators and a proof that analytic bounded point evaluations exist

The Extended Field of Operator Theory Michael A. Dritschel,2007-06-25 This volume contains contributions originating from the International Workshop on Operator Theory and Its Applications IWOTA held in Newcastle upon Tyne in July 2004 The articles expertly cover a broad range of material at the cutting edge of functional analysis and its applications The works are written by world authorities in their specialities *Harmonic Analysis, Function Theory, Operator Theory, and Their Applications* ,2018 *Introduction to Operator Theory I* A. Brown,C. Pearcy,2013-06-02 This book was written expressly to serve as a textbook for a one or two semester introductory graduate course in functional analysis Its soon to be published companion volume Operators on Hilbert Space is in tended to be used as a textbook for a subsequent course in operator theory In writing these books we have naturally been concerned with the level of preparation of the potential reader and roughly speaking we suppose him to be familiar with the approximate equivalent of a one semester course in each of the following areas linear algebra general topology complex analysis and measure theory Experience has taught us however that such a sequence of courses inevitably fails to treat certain topics that are important in the study of functional analysis and operator theory For example tensor products are frequently not discussed in a first course in linear algebra Likewise for the topics of convergence of nets and the Baire category theorem in a course in topology and the connections between measure and topology in a course in measure theory For this reason we have chosen to devote the first ten chapters of this volume entitled Part I to topics of a preliminary nature In other words Part I summarizes in considerable detail what a student should and eventually must know in order to study functional analysis and operator theory successfully
