Type Inheritance and Relational Theory C.J. Date, 2016-09-08 Type inheritance is that phenomenon according to which we can say for example that every square is also a rectangle and so properties that apply to rectangles in general apply to squares in particular In other words squares are a subtype of rectangles and rectangles are a supertype of squares Recognizing and acting upon such subtype supertype relationships provides numerous benefits Certainly it can help in data modeling and it can also provide for code reuse in applications For these reasons many languages including the standard database language SQL have long supported such relationships However there doesn't seem to be any consensus in the

community at large on a formal rigorous and abstract model of inheritance This book proposes such a model one that enjoys several advantages over other approaches not the least of which it is that it is fully compatible with the well known relational model of data Topics the model covers include Both single and multiple inheritance Scalar tuple and relation inheritance Type lattices and union and intersection types Polymorphism and substitutability Compile time and run time binding All of these topics are described in detail in the book with numerous illustrative examples exercises and answers The book also discusses several alternative approaches In particular it includes a detailed discussion and analysis of inheritance as supported in the SQL standard

Lyng, 2020-10-12 Cross industry innovation introduces a dilemma for the innovation process On one hand there is a broad consensus in research that diversity in knowledge leads to increased levels of novelty in innovation On the other hand the crossing of industries boundaries is known to cause knowledge boundaries between actors This book contributes to this end by the development of new understanding of important aspects in cross industry innovation The empirical bases for this research are case data from the Pumps Pipes association in US and Norway conferences and 7 Norwegian cross industry collaborations and cross industry cases from the Norway Health Tech cluster **The Annual Charities Register and Digest**, 1897
