## **Object Oriented Reuse Concurrency And Distribution An Ada Based Approach:**

*Object-oriented Reuse, Concurrency, and Distribution* Colin Atkinson,1991 Now software engineers can learn how to apply the techniques of object oriented programming to large systems This book shows how object oriented programming can be used to develop reusable components especially for concurrent and distributed systems Using the DRAGOON Language a new language that has evolved from a European research effort it provides a coherent framework for developing systems which allow for dynamic reconfiguration and fault tolerance All the examples in the book can be easily implemented in the Ada language     Object-Based Distributed Programming Rachid Guerraoui,Oscar Nierstrasz,Michel Riveill,1994-05-27 Interest has grown rapidly over the past dozen years in the application of object oriented programming and methods to the development of distributed open systems This volume presents the proceedings of a workshop intended to assess the current state of research in this field and to facilitate interaction between groups working on very different aspects of object oriented distributed systems The workshop was held as part of the 1993 European Conference on Object Oriented Programming ECOOP 93 Over fifty people submitted position papers and participated in the workshop and almost half presented papers The presented papers were carefully reviewed and revised after the workshop and 14 papers were selected for this volume

Parallel and Distributed Processing Jose Rolim,2000-04-19 This volume contains the proceedings from the workshops held in conjunction with the IEEE International Parallel and Distributed Processing Symposium IPDPS 2000 on 1 5 May 2000 in Cancun Mexico The workshops provide a forum for bringing together researchers practitioners and designers from various backgrounds to discuss the state of the art in parallelism They focus on different aspects of parallelism from runtimesystems to formal methods from optics to irregular problems from biology to networks of personal computers from embedded systems to programming environments the following workshops are represented in this volume Workshop on Personal Computer Based Networks of Workstations Workshop on Advances in Parallel and Distributed Computational Models Workshop on Par and Dist Comp in Image Video and Multimedia Workshop on High Level Parallel Prog Models and Supportive Env Workshop on High Performance Data Mining Workshop on Solving Irregularly Structured Problems in Parallel Workshop on Java for Parallel and Distributed Computing Workshop on Biologically Inspired Solutions to Parallel Processing Problems Workshop on Parallel and Distributed Real Time Systems Workshop on Embedded HPC Systems and Applications Recon gurable Architectures Workshop on Formal Methods for Parallel Programming Workshop on Optics and Computer Science Workshop on Run Time Systems for Parallel Programming Workshop on Fault Tolerant Parallel and Distributed Systems All papers published in the workshops proceedings were selected by the program committee on the basis of referee reports Each paper was reviewed by independent referees who judged the papers for originality quality and consistency with the themes of the workshops     **Object-Oriented Technology: ECOOP '97 Workshop Reader** Jan Bosch,Stuart Mitchell,2003-07-30 This book constitutes the joint refereed post conference proceedings of 12 workshops held in conjunction with the 11th

European Conference on Object Oriented Programming ECOOP 97 in Jyvskyl Finland in June 1997 The volume presents close to 100 revised selected contributions including surveys by the respective workshop organizers The wealth of up to date information provided spans the whole spectrum of Object Technologies from theoretical and foundational issues to applications in a variety of domains    **UML for Real** Luciano Lavagno,Grant Martin,Bran V. Selic,2007-05-08 The complexity of most real time and embedded systems often exceeds that of other types of systems since in addition to the usual spectrum of problems inherent in software they need to deal with the complexities of the physical world That world as the proverbial Mr Murphy tells us is an unpredictable and often unfriendly place Consequently there is a very strong motivation to investigate and apply advanced design methods and technologies that could simplify and improve the reliability of real time software design and implementation As a result from the first versions of UML issued in the mid 1990 s designers of embedded and real time systems have taken to UML with vigour and enthusiasm However the dream of a complete model driven design flow from specification through automated optimised code generation has been difficult to realise without some key improvements in UML semantics and syntax specifically targeted to the real time systems problem With the enhancements in UML that have been proposed and are near standardisation with UML 2 0 many of these improvements have been made In the Spring of 2003 adoption of a formalised UML 2 0 specification by the members of the Object Management Group OMG seems very close It is therefore very appropriate to review the status of UML as a set of notations for embedded real time systems both the state of the art and best practices achieved up to this time with UML of previous generations and where the changes embodied in the 2    **Journal of Object-oriented Programming** ,1997

2000 *Parallel Processing* Arndt Bode, Thomas Ludwig, Wolfgang Karl, Roland Wismüller, 2003-06-26 Euro Par the European Conference on Parallel Computing is an international conference series dedicated to the promotion and advancement of all aspects of parallel computing. The major themes can be divided into the broad categories of hardware, software, algorithms and applications for parallel computing. The objective of Euro Par is to provide a forum within which to promote the development of parallel computing both as an industrial technique and an academic discipline, extending the frontier of both the state of the art and the state of the practice. This is particularly important at a time when parallel computing is undergoing strong and sustained development and experiencing real industrial take up. The main audience for and participants of Euro Par are seen as researchers in academic departments, government laboratories and industrial organisations. Euro Par's objective is to become the primary choice of such professionals for the presentation of new results in their specific areas. Euro Par is also interested in applications that demonstrate the effectiveness of the main Euro Par themes. Euro Par now has its own Internet domain with a permanent Web site where the history of the conference series is described: <http://www.euro-par.org>. The Euro Par conference series is sponsored by the Association of Computer Machinery and the International Federation of Information Processing.

**Object-oriented Programming with C++ and Smalltalk** Caleb Drake, 1998 This text describes the design goals and language features of object oriented languages without viewing them from the perspective of any particular language. The author discusses Smalltalk 80 and C so students can understand how these concepts are realized. It provides coverage of the object model from a software design and language feature perspective as well as covering key object oriented principles: data abstraction, inheritance, polymorphism and dynamic binding. Detailed coverage of Smalltalk and C emphasize their similarities and differences in terms of design goals, language features and usage. Also discussed are the benefits of the object model, the latest extensions to C and the application of object oriented concepts to the development of large software projects. Chapter summaries, extensive exercises and a glossary of object oriented terminology support the text.

**Reliable Software Technologies, Ada-Europe ...**, 1998      **Practical Software Reuse** Donald J. Reifer, 1997-08-18 The comprehensive guide to software reengineering and reuse. Despite the fact that most software uses the same blocks of code over and over again, almost all software is built from the ground up. Just starting to catch on is the

idea that these blocks of code can be used as standard components in creating new applications. However, this assembly line mentality is foreign to most software developers. Practical Software Reuse shows developers how to take advantage of existing codes to build commercial software faster and cheaper, covering reuse operations, competitive benchmarking, transitioning to the reuse process, utilizing off the shelf software, and more.
