## **Object Oriented Software Composition:**

*Object-oriented Software Composition* Oscar Marius Nierstrasz, Dionysios C. Tsichritzis, 1995 Software Engineering  
*Invasive Software Composition* Uwe Aßmann, 2003-02-27 Invasive software composition as a new component based way to construct software systems is presented. To improve reuse this method regards software components as greybox and integrates them during composition. Components are distinct in design but are merged in implementations leading to highly integrated and more efficient systems. Building on a minimal set of program transformations composition operator libraries can be developed that parameterize, extend, connect, mediate and aspect weave components. Invasive software composition unifies several software engineering techniques such as generic programming, architecture systems inheritance and aspect oriented programming. The book is centered around the JAVA language and a freely available demonstrator library called COMPOST. The book provides a wealth of material for researchers, students and professional software architects alike.

**Software Composition** Thomas Gschwind, Uwe Assmann, Oscar Nierstrasz, 2005-09-19 Component based software development is the next step after object oriented programming that promises to reduce complexity and improve reusability. These advantages have also been identified by the industry and consequently over the past years a large number of component based techniques and processes have been adopted in many of these organizations. A visible result of this is the number of component models that have been developed and standardized. These models define how individual software components interact with each other and simplify the design process of software systems by allowing developers to choose from previously existing components. The development of component models is a first step in the right direction but there are many challenges that cannot be solved by the development of a new component model alone. Such challenges are the adaptation of components and their development and verification. Software Composition is the premiere workshop to advance the research in component based software engineering and its related fields. SC 2005 was the fourth workshop in this series. As in previous years SC 2005 was organized as an event co-located with the ETAPS conference. This year's program consisted of a keynote on the revival of dynamic languages given by Prof. Oscar Nierstrasz and 13 technical paper presentations (9 full and 4 short papers). The technical papers were carefully selected from a total of 41 submitted papers. Each paper was thoroughly peer-reviewed by at least three members of the program committee and consensus on acceptance was achieved by means of an electronic PC discussion. This LNCS volume contains the revised versions of the papers presented at SC 2005.

*Software Composition* Welf Löwe, Mario Südholt, 2006-08-06 This book constitutes the thoroughly refereed post-proceedings of the 5th International Workshop on Software Composition SC 2006 a satellite event of the European Joint Conferences on Theory and Practice of Software ETAPS 2006. The book presents 21 revised full papers reflecting current research in software composition to foster development of composition models and techniques by using aspect oriented programming, specification of component contracts and protocols and methods of correct

**Software Composition** Cesare Pautasso,Éric Tanter,2008-03-17 The goal of the International Symposia on Software Composition is to advance the state of the research in component based software development We focus on the challenges related to component development reuse veri cation and of course composition

Software composition is becoming more and more important as innovation in software engineering shifts from the development of

individual components to their reuse and recombination in novel ways To this end for the 2008 edition researchers were solicited to contribute on topics related to component adaptation techniques composition languages calculi and type systems as well as emerging composition techniques such as aspect oriented programming service oriented architectures and mashups In line with previous editions of SC contributions were sought focusing on both theory and practice with a particular interest in efforts relating them This LNCS volume contains the proceedings of the 7th International Symposium on Software Composition which was held on March 29 30 2008 as a satellite event of the European Joint Conferences on Theory and Practice of Software ETAPS in Budapest Hungary We received 90 initial submissions from all over the world out of which 70 were considered for evaluation by a Program Committee consisting of 30 international experts Among these submissions we selected 13 long papers and 6 short papers to be included in the proceedings and presented at the conference Each paper went through a thorough revision process and was reviewed by three to five reviewers This ensured the necessary quality for publishing these proceedings in time for the event a first in the history of the symposium

### Software Architecture **Ron Morrison, Flavio Oquendo, 2005-06-20**

The 1st European Workshop on Software Architecture EWSA 2004 was held in St Andrews Scotland on 21 22 May 2004 The workshop provided an international forum for researchers and practitioners from academia and industry to discuss a wide range of topics in the area of software architecture and to jointly formulate an agenda for future research We were pleased to continue this forum in EWSA 2005 The importance of software architecture as a fundamental area of software engineering continues to grow In addition to describing the underlying structure of software systems architectures are now being

used to model and understand dynamic behavior. New areas of study which have their roots in control systems are beginning to emerge. The field of autonomics requires an underlying software architecture to describe the executing computation as does any control system that involves system evolution. The range of papers in EWSA 2005 reflected both the traditional and new applications of software architecture techniques. EWSA 2005 distinguished between three types of papers: research papers which describe authors' novel research work; a case study which describes experiences related to software architectures; and position papers which present concise arguments about a topic of software architecture research or practice. The Programme Committee selected 18 papers, 12 research papers, 4 position papers, 1 case study and 1 unrefereed invited paper out of 41 submissions from 20 countries: Australia, Belgium, Brazil, Chile, China, Czech Republic, Finland, France, Germany, India, Italy, Ireland, Korea, Netherlands, Pakistan, Portugal, Spain, Switzerland, UK, USA. All submissions were reviewed by at least three members of the Programme Committee. Papers were selected based on originality, quality, soundness and relevance to the workshop. Credit for the quality of the proceedings goes to all authors of papers.

**Component Software** Clemens Szyperski, 1997 *Component Software Beyond Object Oriented Programming* explains the technical foundations of this evolving technology and its importance in the software market place. It provides in-depth discussion of both the technical and the business issues to be considered, then moves on to suggest approaches for implementing component oriented software production and the organizational requirements for success. The author draws on his own experience to offer tried and tested solutions to common problems and novel approaches to potential pitfalls. Anyone responsible for developing software strategy, evaluating new technologies, buying or building software will find Clemens Szyperski's objective and market aware perspective of this new area invaluable. Helpful Features: Include a uniquely objective comparison of the industry front runners' products Sun's Java Beans, Microsoft's DCOM and Active X, the OMG's CORBA and IIOP, a description of the emerging industry standards being developed by consortia such as the OMG and the OPEN Group, studies of component oriented tools and languages using Java and Component Pascal as examples, in-depth discussion of the
