Occupational Cancer Epidemiology:

Occupational Cancer Epidemiology Pierre Band, 2012-12-06 The identification of occupational cancer risk factors and of carcinogens in the workplace is assuming increasing importance in cancer epidemiology. This book, which contains the proceedings of a symposium held in Vancouver in June 1988, combines overviews by experts on substantive topics and methodologic issues of broad interest in occupational cancer epidemiology. Among the former are state-of-the-art reviews emphasizing recent data and new and innovative analytic approaches. The substantive topics include discussion of cancer risks from exposure to complex organic mixtures, asbestos and man-made fibers, herbicides, radon, and electromagnetic fields. Risk assessment, exposure assessment, and analysis of occupational cohort studies are examples of the methodologic issues addressed. This book provides basic information and opens perspectives on new areas of research. In organizing our symposium, we were greatly assisted by Betty Fata and Kim Rust of Venue West Conference Ltd. We appreciate the financial support received from the following: Cancer Control Agency of British Columbia, Alcan Aluminium Ltd, National Health Research Development Program, Workers Compensation Board of British Columbia, Purdue Frederick Inc, Rhone-Poulenc Pharma Inc, London Drugs Ltd, Ciba-Geigy Canada Ltd, Bristol-Myers Pharmaceutical Group, Schering Canada Inc, Hoffmann-La Roche Ltd, Sterling Drug Ltd, Parke-Davis Canada Inc, Beecham Laboratories, Pfizer Canada Inc, Roussel Canada Inc.

Occupational Cancers Sisko Anttila, Paolo Boffetta, 2014-07-28 This book is a comprehensive guide to occupational factors of malignant diseases. It discusses potentially work-related malignancies in the context of exposure assessment, specific clinical and pathological features of occupational cancer, and biomarkers of exposure and disease. Epidemiological data about risk ratios of the cancer in question are reviewed for various occupations and with exposure to specific carcinogens, carcinogenic mechanisms, host susceptibility factors, genetic and other, and other environmental and life-style risk factors. Aspects such as surveillance of workers exposed to carcinogens and strategies for prevention of occupational cancer are also discussed. *Occupational Cancers* is aimed at oncologists, pathologists, residents in training, clinical researchers, clinicians in occupational health, epidemiologists, pulmonologists, lawyers, and public health officials. **Quantification of Occupational Cancer** Richard Peto, Marvin Schneiderman, 1981

Fundamentals of Cancer Epidemiology Philip C. Nasca, Harris Pastides, 2001 Ideal for first-time students, *Fundamentals of Cancer Epidemiology* summarizes the current body of knowledge of what cancer is, how it is defined, what causes it, how it develops in biological and genetic terms, and its descriptive epidemiology. Using a unique framework, this text helps students develop an in-depth understanding of major risk factors and how they affect specific cancers, as well as how co-factors contribute to risk for particular cancers. Features include content structured for a 15-week course, exercises at the end of each chapter, co-authored content for uniformity and continuity.

Fraumeni Jr., 2006-08-24 This much anticipated Third Edition provides a comprehensive presentation of the global burden and patterns of cancer occurrence along with new developments in our understanding of cancer causation and prevention Special attention is given to epidemiologic approaches that incorporate molecular biomarkers based on genomic and other emerging technologies providing new insights into the role of genetic predisposition and gene environment interactions in cancer induction In addition new chapters are included on social class disparities in cancer incidence and mortality the role of obesity and physical inactivity in cancer etiology the potential effects of electromagnetic fields and radiofrequency radiation and the principles of cancer chemoprevention The textbook is organized into five sections Basic Concepts The Magnitude of Cancer The Causes of Cancer Cancer by Tissue of Origin Cancer Prevention and Control In this new edition Drs David Schottenfeld and Joseph F Fraumeni Jr have enlisted three distinguished Associate Editors Drs Jonathan Samet of Johns Hopkins University Graham Colditz of Harvard University and Alice Whittemore of Stanford University Cancer Risk by Social Class and Occupation Eero I. Pukkala, 1995 This study deals with the vexed question of what groups in the general population run the risk of developing cancer Based on information provided by the highly regarded Finnish Cancer Registry the survey considers the incidence of cancers affecting as many as 46 parts of the body and their links with 335 occupational categories By adjusting the occupation specific risk ratios for social class restricting their study to a particular age group and applying the same criteria to women as to men the

author strives to make the relationship between cancers and certain occupations as clear as possible His results are shown to correlate well with those obtained from specific studies of occupational cancer Factors related to a person's occupation seem to determine some cancer risks while the overall incidence and types of malignancy appear to be associated with the way of life of one's social class Smoking diet and reproductive factors are discussed from this viewpoint Of interest for future research new connections between disease and occupation are indicated in some contributions Epidemiologists oncologists environmentalists and those working in preventive medicine as well as in occupational and public health will find much to interest them in this clearly organized book **Directory of On-going Research in Cancer Epidemiology 1996 R.**

Occupational Cancer in Developing Countries Neil Pearce, 1994 Cancers due to exposures in the workplace in developing countries have received little attention because of the overriding problems in those regions of communicable diseases poverty malnutrition vulnerability to natural disasters and war This book shows however that the global process of industrialization is resulting in increased exposures to occupational carcinogens in developing countries owing to unsafe technology bad working conditions ineffective legislation on occupational safety and health and inadequate supervision These factors are exacerbated by the fact that a workforce with generally poor health and nutritional status and which includes many women and children is more vulnerable to many diseases including cancer The transfer of hazardous industries and wastes from developed to developing countries is of particular concern This publication brings together all of the available published data on occupational cancer in developing countries and presents the results of a survey carried out at IARC on common occupational exposures and measures that have been taken to control them The overview indicates where information is lacking about the health effects of agents used in developing countries many of which are banned or restricted elsewhere
