Quantization on Nilpotent Lie Groups Veronique Fischer, Michael Ruzhansky, 2016-03-08 This book presents a consistent development of the Kohn Nirenberg type global quantization theory in the setting of graded nilpotent Lie groups in terms of their representations It contains a detailed exposition of related background topics on homogeneous Lie groups nilpotent Lie groups and the analysis of Rockland operators on graded Lie groups together with their associated Sobolev spaces For the specific example of the Heisenberg group the theory is illustrated in detail In addition the book features a brief account of the corresponding quantization theory in the setting of compact Lie groups The monograph is the winner of the 2014 Ferran Sunyer i Balaguer Prize **Encyclopaedia of Mathematics** Michiel Hazewinkel, 2013-12-01 *Second Order Analysis on*

$(\mathcal{P}_2(M), W_2)$  Nicola Gigli, 2012-02-22 The author develops a rigorous second order analysis on the space of probability measures on a Riemannian manifold endowed with the quadratic optimal transport distance  $W_2$  The discussion includes definition of covariant derivative discussion of the problem of existence of parallel transport calculus of the Riemannian curvature tensor differentiability of the exponential map and existence of Jacobi fields This approach does not require any smoothness assumption on the measures considered     *Time-Varying Vector Fields and Their Flows* Saber Jafarpour, Andrew D. Lewis, 2014-10-10 This short book provides a comprehensive and unified treatment of time varying vector fields under a variety of regularity hypotheses namely finitely differentiable Lipschitz smooth holomorphic and real analytic The presentation of this material in the real analytic setting is new as is the manner in which the various hypotheses are unified using functional analysis Indeed a major contribution of the book is the coherent development of locally convex topologies for the space of real analytic sections of a vector bundle and the development of this in a manner that relates easily to classically known topologies in for example the finitely differentiable and smooth cases The tools used in this development will be of use to researchers in the area of geometric functional analysis     **Measurable, Continuous and Smooth Vectors for Semigroups and Group Representations** Robert T.
