Measurement Issues And Behavior Of Productivity Variables:

Measurement Issues and Behavior of Productivity Variables Ali Dogramaci,2013-04-17 This book presents a set of papers from the leading edge of current research on productivity analysis The focus is on alternative forms of measurement methods and their implications The book begins with a chapter by V Corbo and J de Melo comparing the effects of using different production frontier models for measuring technical efficiency when using census data The second chapter by H Pesaran and R Tarling is a detailed analysis of measurement of labor and its variations over time The next two chapters concern the measurement of capital The first of these is written by M F Mohr the second is by B M Fraumeni and D W Jorgenson The final chapter is by I B Kravis A W Heston and R Summers and concerns the behavior of productivity and service prices Decisions for improving productivity rely upon explicit as well as implicit assumptions on how productivity is related to a variety of factors Determining the right relationships hinges on how these factors are measured and how the models are set This is why better understanding of measurement issues and behavior of variables related to productivity can lead more effective policies We plan to continue in this series to present the current research of major different schools of thought in the field

Econometrics: Econometrics and the cost of capital : essays in honor of Dale W. Jorgenson Dale Weldeau Jorgenson,2000 This volume summarizes the economic theory the econometric methodology and the empirical findings resulting from the new approach to econometric modelling of producer behaviour *The Measurement of Saving, Investment, and Wealth* Robert E. Lipsey,Helen Stone Tice,2008-04-15 There is probably no concept other than saving for which U S official agencies issue annual estimates that differ by more than a third as they have done for net household saving or for which reputable scholars claim that the correct measure is close to ten times the officially published one Yet despite agreement among economists and policymakers on the importance of this measure huge inconsistencies persist Contributors to this volume investigate ways to improve aggregate and sectoral saving and investment estimates and analyze microdata from recent household wealth surveys They provide analyses of National Income and Product Account NIPA and Flow of Funds measures and of saving and survey based wealth estimates Conceptual and methodological questions are discussed regarding long term trends in the U S wealth inequality age wealth profiles pensions and wealth distribution and biases in inferences about life cycle changes in saving and wealth Some new assessments are offered for investment in human and nonhuman capital the government contribution to national wealth NIPA personal and corporate saving and banking imputation

Productivity Measurement and Management at the Company Level Kazukiyo Kurosawa,1991 This volume provides a comprehensive overview of productivity analysis at the corporate level It begins with productivity measurement and evaluation in the workplace where the main focus is on unit input requirement The theory of worker productivity and its management is discussed intensively Secondly the intermediate stage of aggregation of activities at corporate level is given in terms of total cost rentability and productivity nexus Using this approach the total efficiency of corporate activity is

evaluated and compared with productivity performance both in Japan and worldwide as well as with the average performance of the industry in which the firm is involved Thirdly the final concept of corporate productivity added value productivity is examined Added value is the total fruit of corporate activities and the fund to be distributed among its members The total structure of added value which is not quite so simple as many textbooks have led to believe is analysed in detail and applied to the corporate productivity management scheme Finally white collar productivity one of the most topical areas in productivity studies today is also examined in detail ***The Cumulative Book Index***, 1988 A world list of books in the English language ***Identifying Inefficiencies in Resource Management*** Mary Susan Easun, 1992 ***The Journal of Economic Perspectives***, 1988 This journal attempts to fill a gap between the general interest press and other academic economics journals Its articles relate to active lines of economics research economic analysis of public policy issues state of the art economic thinking and directions for future research It also aims to provide material for classroom use and to address issues relating to the economics profession ***The Accumulation of Human and Nonhuman Capital, 1943-1984*** Dale Weldeau Jorgenson, Barbara M. Fraumeni, 1988 ***Capital Accumulation, Technical Progress and Economic Growth*** Chong-il Kim, 1992 ***The Effects of Capital Subsidization on Israeli Industry*** Arie Bregman, Melvyn A. Fuss, Haim Regev, 1998 An industrial policy of subsidizing physical capital investment has been utilized in many countries in order to encourage export growth and spread economic development to outlying areas For Israel we possess a unique time series cross section micro data set that details investment and its associated subsidies by vintage at the level of the individual enterprise for 620 firms These data provide the means by which an empirical analysis of the effects of the policy of subsidizing capital can be undertaken We estimate that for the years 1990-94 this policy has resulted in production inefficiencies ranging from 5% for firms that receive the average level of subsidies to 15% for heavily subsidized firms We also document the fact that much of the subsidization appears not to have been necessary in the sense that subsidized firms generally have earned higher rates of return on their total physical capital including that portion which was subsidized than firms that were not subsidized

Economic Demography T. Paul Schultz, 1998 ***An Empirical Analysis of the Determinants of Long-run Growth and Technical Progress in Southeast Asia*** Jesus Felipe, 1995 This research work is an empirical analysis of the determinants of long run growth and technical progress in five Southeast Asian countries Indonesia Malaysia the Philippines Singapore and Thailand i.e. the ASEAN countries during the last three decades We ask the fundamental question of why these economies have grown and concentrate on the nature of technical progress behind the growth process We have tested different endogenous growth models and have analyzed whether the determinant of technical progress proposed by each of the models is part of the long run production function The analysis concentrates on the individual countries in an attempt to point out differences in the growth process and in the nature of the technical process associated to it Our empirical findings indicate that an important determinant of long run growth in the ASEAN countries is imports of foreign technology However

none of the variables pointed out by recent endogenous growth models i e aggregate capital education government capital expenditures is capable of generating endogenous growth as defined by these models Even the role of exports except in Singapore is not so clear Education exports of machinery and GDP growth are important determinants of TFP growth in all five ASEAN countries and Japanese FDI appears to be particularly important in Singapore We have found complementarity between the level of education and Japanese FDI as well as between the former and imports of machinery However we conclude that none of the determinants analyzed separately is capable of accounting for the growth of these countries and that only a sustained big push package can be responsible for the increase in productivity and growth in the region
