

Pressure drop measurements in low liquid loading three-phase flows

Jørn Kjølås, Tor Erling Unander, Marita Wolden, Andrea Shmueli, SINTEF
Henning Holm, Statoil

ABSTRACT

At high gas rates, even small amounts of liquid can have a significant impact on the pressure drop, and this is important to model accurately when designing wet gas transport systems. In order to gain an improved understanding of this matter, several sets of two- and three-phase experiments in low liquid loading flows with high gas rates were conducted in the Large Scale Loop at the SINTEF Multiphase Flow Laboratory. The experiments were conducted in both a near-horizontal 8" pipe, and a vertical 4" pipe, where particular emphasis was put on studying the effect of water cut. The measurements show that the frictional pressure drop is very sensitive to the water cut in these circumstances, even though the estimated liquid content is typically less than 1%. For instance, at 50% water cut, the frictional pressure drop in the near-horizontal 8" pipe was found to be up to 30% higher than in the respective two-phase scenarios. In the vertical 4" experiments the three-phase effects were found to have similar magnitudes. To explain these surprising results, the physical mechanisms that may be responsible for this phenomenon are briefly examined and discussed.

Figure 1 and Figure 2 show examples of the observed behaviour in the 4" vertical pipe, where the frictional pressure drop divided by that measured for two-phase gas-oil is plotted against the water cut and the liquid rate. These experiments and the associated measurements are described in more detail in the following sections.

Figure 1: Frictional pressure drop normalized with the two-phase gas-oil pressure drop plotted versus water cut.

Figure 2: Frictional pressure drop normalized with the two-phase gas-oil pressure drop plotted versus USL.

Measuring Techniques in Gas-Liquid Two-Phase Flows J.M. Delhay, G. Cognet, 2012-12-06 A IUTAM symposium on Measuring Techniques in Gas Liquid Two Phase Flows was held on July 5-8 1983 in Nancy France This topic included instrumentation for steam water and liquid vapor flows but strictly excluded measuring techniques for gas or liquid flows with solid particles The top priority in the paper selection was given to presentations of new methods which had been substantiated by theoretical modeling calibration tests and comparison tests with other techniques Examples of experimental results obtained with the proposed instrumentation had to be displayed However the interpretation of these results in terms of two phase flow or heat transfer modeling did not fall within the scope of the meeting Thirty four papers were presented during the Symposium and 79 participants coming from Canada European countries Japan and the United States attended the sessions They represented not only Universities but also state agencies and private companies After the meeting each paper was peer reviewed by at least three referees The Editors of this Proceedings Volume are pleased to extend their deep gratitude to the following reviewers J L Achard R J Adrian B Azzopardi J A Boure G Costigan M Courtaud A E Dukler F Durst J R Fincke G Gouesbet P Griffith T J Hanratty A Hawighorst T R Heidrick G Hetsroni Y Y Hsu M **Measurements in**
