Measures On Infinite Dimensional Spaces:

Measures on Infinite Dimensional Spaces Yasuo Yamasaki, 1985 This book is based on lectures given at Yale and Kyoto Universities and provides a self contained detailed exposition of the following subjects 1 The construction of infinite dimensional measures 2 Invariance and quasi invariance of measures under translations This book furnishes an important tool for the analysis of physical systems with infinite degrees of freedom such as field theory statistical physics and field dynamics by providing material on the foundations of these problems

Theorem for Measures on Infinite Dimensional Spaces Franz Peter Edward Harpain, 1968 **Measure and Integration Theory on Infinite-Dimensional Spaces**, 1972-10-16 Measure and Integration Theory on Infinite Dimensional Spaces **Gaussian Measures in Finite and Infinite Dimensions** Daniel W. Stroock, 2023 This text provides a concise

introduction suitable for a one semester special topics course to the remarkable properties of Gaussian measures on both finite and infinite dimensional spaces It begins with a brief resum of probabilistic results in which Fourier analysis plays an essential role and those results are then applied to derive a few basic facts about Gaussian measures on finite dimensional spaces In anticipation of the analysis of Gaussian measures on infinite dimensional spaces particular attention is given to those properties of Gaussian measures that are dimension independent and Gaussian processes are constructed The rest of the book is devoted to the study of Gaussian measures on Banach spaces The perspective adopted is the one introduced by I Segal and developed by L Gross in which the Hilbert structure underlying the measure is emphasized The contents of this book should be accessible to either undergraduate or graduate students who are interested in probability theory and have a solid background in Lebesgue integration theory and a familiarity with basic functional analysis Although the focus is on Gaussian measures the book introduces its readers to techniques and ideas that have applications in other contexts

Convex measures on infinite-dimensional vector spaces Christer Borell, 1974 *Gaussian Measures in Hilbert Space* Alexander Kukush, 2020-02-26 At the nexus of probability theory geometry and statistics a Gaussian measure is constructed on a Hilbert space in two ways as a product measure and via a characteristic functional based on Minlos Sazonov theorem As such it can be utilized for obtaining results for topological vector spaces Gaussian Measures contains the proof for Ferniques theorem and its relation to exponential moments in Banach space Furthermore the fundamental Feldman Hjek dichotomy for Gaussian measures in Hilbert space is investigated Applications in statistics are also outlined In addition to chapters devoted to measure theory this book highlights problems related to Gaussian measures in Hilbert and Banach spaces Borell probability measures are also addressed with properties of characteristic functionals examined and a proof given based on the classical Banach Steinhaus theorem Gaussian Measures is suitable for graduate students plus advanced undergraduate

students in mathematics and statistics It is also of interest to students in related fields from other disciplines Results are presented as lemmas theorems and corollaries while all statements are proven Each subsection ends with teaching problems and a separate chapter contains detailed solutions to all the problems With its student tested approach this book is a superb introduction to the theory of Gaussian measures on infinite dimensional spaces **Invariant and Quasiinvariant**

Measures in Infinite-dimensional Topological Vector Spaces Gogi Pantsulaia, 2007 This monograph deals with certain aspects of the general theory of systems The author develops the ergodic theory which is the theory of quasilinear and invariant measures in such infinite dimensional vector spaces which appear as models of various physical economic genetic linguistic social etc processes The methods of ergodic theory are successful as applied to study properties of such systems A foundation for ergodic theory was stimulated by the necessity of a consideration of statistic mechanic problems and was directly connected with the works of G Birkhoff Kryloff and Bogoliuboff E Hoph and other famous mathematicians

Differentiable Measures and the Malliavin Calculus Vladimir Igorevich Bogachev, 2010-07-21 This book provides the reader with the principal concepts and results related to differential properties of measures on infinite dimensional spaces In the finite dimensional case such properties are described in terms of densities of measures with respect to Lebesgue measure In the infinite dimensional case new phenomena arise For the first time a detailed account is given of the theory of differentiable measures initiated by S V Fomin in the 1960s since then the method has found many various important applications Differentiable properties are described for diverse concrete classes of measures arising in applications for example Gaussian convex stable Gibbsian and for distributions of random processes Sobolev classes for measures on finite and infinite dimensional spaces are discussed in detail Finally we present the main ideas and results of the Malliavin calculus a powerful method to study smoothness properties of the distributions of nonlinear functionals on infinite dimensional spaces with measures The target readership includes mathematicians and physicists whose research is related to measures on infinite dimensional spaces distributions of random processes and differential equations in infinite dimensional spaces The book includes an extensive bibliography on the subject Measure and Integration Theory on Infinite-dimensional Spaces

Measure-Valued Solutions for Nonlinear Evolution Equations on Banach Spaces and Their Optimal Control N. U. Ahmed, Shian Wang, 2023-09-12

This book offers the first comprehensive presentation of measure valued solutions for nonlinear deterministic and stochastic evolution equations on infinite dimensional Banach spaces Unlike traditional solutions measure valued solutions allow for a much broader class of abstract evolution equations to be addressed providing a broader approach The book presents extensive results on the existence of measure valued solutions for differential equations that have no solutions in the usual sense It covers a range of topics including evolution equations with continuous discontinuous vector fields neutral evolution equations subject to vector measures as impulsive forces stochastic evolution equations and optimal control of evolution equations The optimal control problems considered cover the existence of solutions necessary conditions of optimality and more significantly complementing the existing literature This book will be of great interest to researchers in functional analysis partial differential equations dynamic systems and their optimal control and their applications advancing previous research and providing a foundation for further exploration of the field

Stochastic Processes - Mathematics and Physics II Sergio Albeverio, Philippe Blanchard, Ludwig Streit, 2006-11-15

This second BiBoS volume surveys recent developments in the theory of stochastic processes Particular attention is given to the interaction between mathematics and physics Main topics include statistical mechanics stochastic mechanics differential geometry stochastic processes quantum mechanics quantum field theory probability measures central limit theorems stochastic differential equations Dirichlet forms

An Introduction to Infinite-Dimensional Analysis Giuseppe Da Prato, 2006-08-25

Based on well known lectures given at Scuola Normale Superiore in Pisa this book introduces analysis in a separable Hilbert space of infinite dimension It starts from the definition of Gaussian measures in Hilbert spaces concepts such as the Cameron Martin formula Brownian motion and Wiener integral are introduced in a simple way These concepts are then used to illustrate basic stochastic dynamical systems and Markov semi groups paying attention to their long time behavior
