Measuring Colour R. W. G. Hunt, M. R. Pointer, 2011-10-17 The classic authority on colour measurement now fully revised and updated with the latest CIE recommendations. The measurement of colour is of major importance in many commercial applications such as the textile, paint and foodstuff industries as well as having a significant role in the lighting, paper, printing, cosmetic, plastics, glass, chemical, photographic, television, transport and communication industries. Building upon the success of earlier editions, the 4th edition of *Measuring Colour* has been updated throughout with new chapters on colour rendering by light sources, colorimetry with digital cameras, factors affecting the appearance of coloured objects and details of new CIE colour appearance models. Key features: Presents colour measurement not simply as a matter of instrumentation and engineering but also involving the physiology and psychology of the human observer. Covers the principles of colour measurement rather than a guide to instruments. Provides the reader with the basic facts needed to measure colour. Describes and explains the interactions between how colour is affected by the type of lighting, by the nature of the objects illuminated and by the properties of the colour vision of observers. Includes many worked examples and a series of Appendices provides the numerical data needed in many colorimetric calculations. The addition of 4th edition co-author Dr Pointer has facilitated the inclusion of extensive practical advice on measurement procedures and the latest CIE recommendations.

Colour Measurement M. L. Gulrajani, 2010-08-31 The measurement of colour is important in many commercial operations and professions such as bleaching and colouration of textiles, applications of paints, dentistry and colouration of food products. It includes topics such as expressing colours numerically, camera based colour measurement, colour shade sorting and determining, and improving the accuracy of colour measurement. Part two presents a selection of industrial applications illustrating the use of colour measurement in textiles, paint, teeth, hair and food. With its international range of contributors, *Colour Measurement: Principles, Advances and Industrial Applications* is beneficial to a variety of readers such as colour technologists, colour quality inspectors, product developers, dentists, cosmetologists and anyone who uses colour in their work. It will also be a valuable reference for academics and students studying design, fashion or colour related subjects. Discusses colour measurement theories and the latest technological and scientific developments of measuring colour. Case studies illustrate camera based colour measurement and review visual and instrumental evaluation of whiteness and yellowness applications in industries including cosmetics and dentistry.
