New Scientist and Science Journal, 1990 **Handbook of Meat and Meat Processing**, 2012 Preface The consumption of red meat and meat products has a long history in most cultures Meat is a source of nutrients as well as a sign of wealth in some countries Various techniques have been developed in different parts of the world over the centuries to preserve meat for extended shelf life and enjoyment Even nonedible parts of animals are used for various reasons Thus meat meat products and by products are important to our daily life In the past three decades many books on the science and technology of meats and meat products have been published Many of these books are useful reference texts and well

received by professionals in the meat industries academia and the government Meat Science and Applications is one such example It was published in 2001 by the then Marcel Dekker of New York A decade later the current publisher CRC Press is releasing a second edition of the book with a new title Handbook of Meat and Meat Processing The change in title reflects the expansion of coverage in depth and breadth from the first edition as illustrated in the table of contents of this book Apart from updating materials in the first edition the new edition contains 51 chapters instead of 27 This second edition is divided into six parts Part I covers an overview of the meat processing industries in the United States followed by chapters on muscle biology meat composition and chemistry Part II covers meat attributes and characteristics such as color flavor and analyses Part III describes the primary processing of meat including antemortem and postmortem slaughter carcass evaluation religious status and so on Part IV discusses the principles and applications in the secondary processing of meat for example breeding curing and fermentation Meat & Poultry ,2009-07 Ingredients in Meat Products Rodrigo Tarté,2009-02-21 There is little doubt that today s food industry is faced with a rapidly changing market landscape The obvious need to continue to provide consumers with nutritious delectable safe and affordable food products which are also profitable for food manufacturers as well as the ongoing challenge of ensuring the delivery of adequate nutrition to hundreds of millions of disadvantaged people around the world appears at least as much as if not more than ever to be at odds with the challenges posed by soaring energy and food commodity prices fast paced changes in consumer demographics habits and preferences and the continual need to stay ahead of current and emerging food safety issues In addition to this the present ubiquity in the industry of terms such as functional foods nutraceuticals low sodium low fat clean label minimal processing and natural to name a few underscores yet a different dimension of the challenges faced by food processors today On the other hand however the solutions of many of these challenges may concurrently present the food industry with unique and exciting opportunities The processed meat industry despite its long history and tradition is certainly not exempt from having to face these modern challenges nor excluded from realizing the promises of the opportunities that may lie ahead **New Scientist** ,1969 *Electrical News.
