Meat Processing Improving Quality:

Meat Processing Joseph P. Kerry, John F. Kerry, David Ledward, 2002-09-06 Meat is both a major food in its own right and a staple ingredient in many food products. With its distinguished editors and an international team of contributors, *Meat processing* reviews research on what defines and determines meat quality and how it can be maintained or improved during processing. Part one considers the various aspects of meat quality. There are chapters on what determines the quality of raw meat, changing views of the nutritional quality of meat and the factors determining such quality attributes as colour and flavour. Part two discusses how these aspects of quality are measured, beginning with the identification of appropriate quality indicators. It also includes chapters on both sensory analysis and instrumental methods, including on line monitoring and microbiological analysis. Part three reviews the range of processing techniques that have been deployed at various stages in the supply chain. Chapters include the use of modelling techniques to improve quality and productivity in beef cattle production, new decontamination techniques after slaughter, automation of carcass processing, high pressure processing of meat, developments in modified atmosphere packaging and chilling and freezing. There are also chapters on particular products such as restructured meat and fermented meat products. With its detailed and comprehensive coverage of what defines and determines meat quality, *Meat processing* is a standard reference for all those involved in the meat industry and meat research. Reviews research on what defines and determines meat quality and how it can be measured, maintained and improved during processing. Examines the range of processing techniques that have been deployed at various stages in the supply chain. Comprehensively outlines the new decontamination techniques after slaughter and automation of carcass processing.

Meat Processing, 1987 [Improving the Sensory and Nutritional Quality of Fresh Meat](#) Joseph Kerry, 2009-01-22 Understanding of the scientific basis of quality attributes in meat is becoming more advanced, providing more effective approaches to the control of meat eating and technological quality. This important collection reviews essential knowledge of the mechanisms underlying quality characteristics and methods to improve meat sensory and nutritional quality. Part one analyses the scientific basis of meat quality attributes such as texture and tenderness, colour, water holding capacity and flavour development. Chapters on the nutritional quality of meat and meat sensory evaluation complete the section. Part two discusses significant insights into the biology of meat quality obtained from genomic and proteomic perspectives, with chapters focussing on different types of meat. Parts three and four then review production and processing strategies to optimise meat quality, considering aspects such as production practices and meat nutritional quality, dietary antioxidants and antimicrobials. Carcass interventions, chilling and freezing and packaging Methods of meat grading and quality analysis are also included. With its distinguished editors and international team of contributors, *Improving the sensory and nutritional quality of fresh meat* is a standard reference for those industrialists and academics interested in optimising meat quality. Reviews methods to improve meat sensory and nutritional quality, considering the effects of different production

practices such as chilling freezing and packaging Analyses the scientific basis of meat quality attributes covering texture tenderness colour and water holding capacity Examines production and processing strategies to optimise meat quality including the current state of development and future potential
