Meat-eating and Human Evolution Craig B. Stanford, Henry T. Bunn, 2023 When why and how early humans began to
eat meat are fundamental unresolved questions in the study of human origins

The Hunting Apes Craig B. Stanford, 2020-12-08 What makes humans unique What makes us the most successful animal species inhabiting the Earth
today Most scientists agree that the key to our success is the unusually large size of our brains Our large brains gave us our
exceptional thinking capacity and led to humans other distinctive characteristics including advanced communication tool use
and walking on two legs Or was it the other way around Did the challenges faced by early humans push the species toward
communication tool use and walking and in doing so drive the evolutionary engine toward a large brain In this provocative
new book Craig Stanford presents an intriguing alternative to this puzzling question an alternative grounded in recent
groundbreaking scientific observation According to Stanford what made humans unique was meat Or rather the desire for
meat the eating of meat the hunting of meat and the sharing of meat Based on new insights into the behavior of chimps and
other great apes our now extinct human ancestors and existing hunting and gathering societies Stanford shows the
remarkable role that meat has played in these societies Perhaps because it provides a highly concentrated source of protein
essential for the development and health of the brain meat is craved by many primates including humans This craving has
given meat genuine power the power to cause males to form hunting parties and organize entire cultures around hunting And
it has given men the power to manipulate and control women in these cultures Stanford argues that the skills developed and
required for successful hunting and especially the sharing of meat spurred the explosion of human brain size over the past
200 000 years He then turns his attention to the ways meat is shared within primate and human societies to argue that this
all important activity has had profound effects on basic social structures that are still felt today Sure to spark a lively debate
Stanford s argument takes the form of an extended essay on human origins The book s small format helpful illustrations and
moderate tone will appeal to all readers interested in those fundamental questions about what makes us human

Meat-eating and Human Evolution Henry Thomas Bunn, 1982 **Meat Eating and Human Evolution** Henry T.
Bunn, 1993 **The Hunting Apes** Craig Britton Stanford, Stanford, Craig Britton Stanford, 1999 Argues that the desire for
meat and the eating hunting and sharing of meat spurred the expansion of human brain size that led to the success of the

human species and describes the continuing social impact of the sharing of meat Should We Eat Meat? Vaclav Smil,2013-03-18 Meat eating is often a contentious subject whether considering the technical ethical environmental political or health related aspects of production and consumption This book is a wide ranging and interdisciplinary examination and critique of meat consumption by humans throughout their evolution and around the world Setting the scene with a chapter on meat's role in human evolution and its growing influence during the development of agricultural practices the book goes on to examine modern production systems their efficiencies outputs and impacts The major global trends of meat consumption are described in order to find out what part its consumption plays in changing modern diets in countries around the world The heart of the book addresses the consequences of the massive carnivory of western diets looking at the inefficiencies of production and at the huge impacts on land water and the atmosphere Health impacts are also covered both positive and negative In conclusion the author looks forward at his vision of rational meat eating where environmental and health impacts are reduced animals are treated more humanely and alternative sources of protein make a higher contribution Should We Eat Meat is not an ideological tract for or against carnivorousness but rather a careful evaluation of meat's roles in human diets and the environmental and health consequences of its production and consumption It will be of interest to a wide readership including professionals and academics in food and agricultural production human health and nutrition environmental science and regulatory and policy making bodies around the world **The Humans Who Went Extinct**

Human Evolution John H. Langdon,2023-01-01 This is an introductory textbook for the study of human evolution and covers all major topics of human origins taught under paleoanthropology anthropology archaeology and evolutionary biology courses This book differs from the existing selection of textbooks in the following ways It incorporates the most recent fossil discoveries and interpretations It balances the discussion between descriptions of fossils and interpretations of behavior of hominins in different time periods It includes current findings of genomics into understanding the more recent stages of

human evolution This important subdiscipline is badly underserved by current texts It consistently addresses the relationship of evidence to our current hypotheses and interpretations The book has an engaging and lucid style suitable for those entering the field Students will find ample case studies illustrations and examples helpful in understanding difficult concepts Tables timelines and maps in every chapter include data summaries and key points The book highlights peripheral points and background concepts in side boxes for easy reference and lists key ideas at the end of each chapter This up to date and easy to read text is suitable for both classroom study and self learning **Food, Science, and the Human Body** , Learn how meat changed the playing field for our earliest ancestors First trace the history of meat eating through human evolution Then use data from cut marks on bones to decipher when exactly we began to eat meat Also consider the nutritive benefits and dangers linked with meat consumption *The Evolution of Hominin Diets* Jean-Jacques Hublin, Michael P.

of these diseases Diet induced metabolic disease is beginning to pass directly from mothers to their children Because of this inter generational amplification an evolutionary crisis is looming This book offers a tantalizing range of information and ideas for readers interested in nutrition anthropology prehistoric studies and human evolution and food diet and human health as viewed from an overtly evolutionary perspective **Human Evolution** Noel Korn,Fred W.
