MECHANICAL BEHAVIOR OF HIGH POLYMERS

By TURNER ALFREY, JR.

Assistant Professor of Polymer Chemistry,
Polytechnic Institute of Brooklyn

The remarkable range of mechanical properties exhibited by high polymers permits them to be used as "rubbers," plastics, textile fibers, films, etc. A systematic treatment of these properties must therefore take a vital place in the High Polymer series. The author attempts to uncover the fundamental principles underlying the mechanical behavior of polymeric structures and to show how this behavior is correlated with the molecular structures involved. This analysis is made on two levels—a phenomenological description and a molecular interpretation. In this book polymer structures are classified and treated as amorphous linear, cross-linked, and crystalline polymers, and polymers admixed with components of low molecular weight. Much original material not previously published is included.
