Mechanizing Hypothesis Formation:

Mechanizing Hypothesis Formation P. Hajek, T. Havranek, 1978-04-01 Mechanizing Hypothesis Formation Petr Hájek, Tomáš Havránek, 1978 **Mechanizing Hypothesis Formation** P. Hajek, T. Havranek, 2012-12-06 Hypothesis formation is known as one of the branches of Artificial Intelligence The general question of Artificial Intelligence Can computers think is specified to the question Can computers formulate and justify hypotheses Various attempts have been made to answer the latter question positively The present book is one such attempt Our aim is not to formalize and mechanize the whole domain of inductive reasoning Our ultimate question is Can computers formulate and justify scientific hypotheses Can they comprehend empirical data and process them rationally using the apparatus of modern mathematical logic and statistics to try to produce a rational image of the observed empirical world Theories of hypothesis formation are sometimes called logics of discovery Plotkin divides a logic of discovery into a logic of induction studying the notion of justification of a hypothesis and a logic of suggestion studying methods of suggesting reasonable hypotheses We use this division for the organization of the present book Chapter I is introductory and explains the subject of our logic of discovery The rest falls into two parts Part A a logic of induction and Part B a logic of suggestion **Mechanizing Hypothesis Formation** Jan Rauch, Milan Šimůnek, David Chudán, Petr Máša, 2022-10-20 Mechanizing hypothesis formation is an approach to exploratory data analysis Its development started in the 1960s inspired by the question can computers formulate and verify scientific hypotheses The development resulted in a general theory of logic of discovery It comprises theoretical calculi dealing with theoretical statements as well as observational calculi dealing with observational statements concerning finite results of observation Both calculi are related through statistical hypotheses tests A GUHA method is a tool of the logic of discovery It uses a one to one relation between theoretical and observational statements to get all interesting theoretical statements A GUHA procedure generates all interesting observational statements and verifies them in a given observational data Output of the procedure consists of all observational statements true in the given data Several GUHA procedures dealing with association rules couples of association rules action rules histograms couples of histograms and patterns based on general contingency tables are involved in the LISp Miner system developed at the Prague University of Economics and Business Various results about observational calculi were achieved and applied together with the LISp Miner system The book covers a brief overview of logic of discovery Many examples of applications of the GUHA procedures to solve real problems relevant to data mining and business intelligence are presented An overview of recent research results relevant to dealing with domain knowledge in data mining and its automation is provided Firsthand experiences with implementation of the GUHA method in the Python language are presented **Theory and Applications of Relational Structures as Knowledge Instruments** Harrie de Swart, Ewa Orłowska, Gunther Schmidt, Marc Roubens, 2004-01-30 Relational structures abound in our daily environment relational databases data mining scaling procedures preference relations etc As the

documentation of scientific results achieved within the European COST Action 274 TARSKI this book advances the understanding of relational structures and the use of relational methods in various application fields The 12 revised full papers were carefully reviewed and selected for presentations The papers are devoted to mechanization of relational reasoning relational scaling and preferences and algebraic and logical foundations of real world relations

Machine Learning, Optimization, and Data Science Giuseppe Nicosia, Varun Ojha, Emanuele La Malfa, Gabriele La Malfa, Panos Pardalos, Giuseppe Di Fatta, Giovanni Giuffrida, Renato Umeton, 2023-03-09 This two volume set LNCS 13810 and 13811 constitutes the refereed proceedings of the 8th International Conference on Machine Learning Optimization and Data Science LOD 2022 together with the papers of the Second Symposium on Artificial Intelligence and Neuroscience ACAIN 2022 The total of 84 full papers presented in this two volume post conference proceedings set was carefully reviewed and selected from 226 submissions These research articles were written by leading scientists in the fields of machine learning artificial intelligence reinforcement learning computational optimization neuroscience and data science presenting a substantial array of ideas technologies algorithms methods and applications

Data Mining and Knowledge Discovery Handbook Oded Maimon, Lior Rokach, 2006-05-28 Data Mining and Knowledge Discovery Handbook organizes all major concepts theories methodologies trends challenges and applications of data mining DM and knowledge discovery in databases KDD into a coherent and unified repository This book first surveys then provides comprehensive yet concise algorithmic descriptions of methods including classic methods plus the extensions and novel methods developed recently This volume concludes with in depth descriptions of data mining applications in various interdisciplinary industries including finance marketing medicine biology engineering telecommunications software and security Data Mining and Knowledge Discovery Handbook is designed for research scientists and graduate level students in computer science and engineering This book is also suitable for professionals in fields such as computing applications information systems management and strategic research management

Database Support for Data Mining Applications Rosa Meo, Pier L. Lanzi, Mika Klemettinen, 2004-07-28 Data mining from traditional relational databases as well as from non traditional ones such as semi structured data Web data and scientific databases housing biological linguistic and sensor data has recently become a popular way of discovering hidden knowledge This book on database support for data mining is developed to approaches exploiting the available database technology declarative data mining intelligent querying and associated issues such as optimization indexing query processing languages and constraints Attention is also paid to the solution of data preprocessing problems such as data cleaning discretization and sampling The 16 reviewed full papers presented were carefully selected from various workshops and conferences to provide complete and competent coverage of the core issues Some papers were developed within an EC funded project on discovering knowledge with inductive queries

Advances in Data Management Zbigniew W. Ras, Agnieszka Dardzinska, 2009-07-11 Data Management is the process of planning coordinating

and controlling data resources More often applications need to store and search a large amount of data Managing Data has been continuously challenged by demands from various areas and applications and has evolved in parallel with advances in hardware and computing techniques This volume focuses on its recent advances and it is composed of five parts and a total of eighteen chapters The first part of the book contains five contributions in the area of information retrieval and Web intelligence a novel approach to solving index selection problem integrated retrieval from Web of documents and data bipolarity in database querying deriving data summarization through ontologies and granular computing for Web intelligence The second part of the book contains four contributions in knowledge discovery area Its third part contains three contributions in information integration and data security area The remaining two parts of the book contain six contributions in the area of intelligent agents and applications of data management in medical domain Automatic Documentation and Mathematical Linguistics ,1984 **A Theory and Methodology of Inductive Learning** Ryszard Stanisław Michalski,1983

Principles of Data Mining and Knowledge Discovery ,1999 Analogical and Inductive Inference Klaus P. Jantke,1987-07-15 This volume contains revised versions of presentations at the International Workshop on Analogical and Inductive Inference AII 86 held in Wendisch Rietz GDR October 16 10 1986 Inductive inference and analogical reasoning are two basic approaches to learning algorithms Both allow for exciting problems and promising concepts of invoking deeper mathematical results for considerable advances in intelligent software systems Hence analogical and inductive inference may be understood as a firm mathematical basis for a large variety of problems in artificial intelligence While the papers on inductive inference contain technical results and reflect the state of the art of this well developed mathematical theory those devoted to analogical reasoning reflect the ongoing process of developing the basic concepts of the approach The workshop thus contributes significantly to the advancement of this field **New Perspectives in Theoretical and Applied**

Statistics Madan Lal Puri,Jose Perez Vilaplana,Wolfgang Wertz,1987-03-12 Contains 40 of the papers presented at the Third International Meeting of Statistics in the Basque Country held in Bilbao Spain in August 1986 Papers present recent important developments in statistical theory including new methodologies and improved or novel theoretical tools which have removed past restrictions and vastly broadened potential applications some have already had significant impact on modeling design and analysis of statistical experiments Chapters cover a wide range of topics including data analysis sampling theory growth curves analysis both theoretical and applied aspects of time series analysis nonparametric theory the Edgeworth expansions in statistics and probability the bootstrap and randomization methods density estimation hypotheses testing pseudorandom numbers and sequential estimation *COMPSTAT 1984* T.
