## **Mondo Internet:**

Graphodigest 2000 Nigel Bradley, 2001-09 Have you ever wondered what the world looks like to your dog Or what it smells and sounds like Do dogs have crushes or love affairs Do they dream and what about This book is the result of 30 years of living with dogs wolves and dingoes The author visits their minds and provides an insight into a species different from our own but in many respects surprisingly the same

*The Internet Myth* Paolo Bory, 2020-04-29 The Internet is broken and Paolo Bory knows how we got here In a powerful book based on original research Bory carefully documents the myths imaginaries and ideologies that shaped the material and cultural history of the Internet As important as this book is to understand our shattered digital world it is essential for those who would fix it Vincent Mosco author of *The Smart City in a Digital World* The Internet Myth retraces and challenges the myth laying at the foundations of the network ideologies the idea that networks by themselves are the main agents of social economic political and cultural change By comparing and integrating different sources related to network histories this book emphasizes how a dominant narrative has extensively contributed to the construction of the Internet myth while other visions of the networked society have been erased from the collective imaginary The book decodes analyzes and challenges the foundations of the network ideologies looking at how networks have been imagined designed and promoted during the crucial phase of the 1990s Three case studies are scrutinized so as to reveal the complexity of network imaginaries in this decade the birth of the Web and the mythopoesis of its inventor and the histories of two Italian networking projects the infrastructural plan Socrate and the civic network Iperbole the first to give free Internet access to citizens The Internet Myth thereby provides a compelling and hidden sociohistorical narrative in order to challenge one of the most powerful myths of our time This title has been published with the financial assistance of the Fondazione Hilda e Felice Vitali Lugano Switzerland

Internet of Things (IoT): Principles and Applications in Engineering Lyu Guanghua,Ismail Keshta,Syed Hadi Hussain Shah,Dr. Haewon Byeon,2024-08-27 Since the introduction of the Internet by ARPANET forty years ago the word Internet has come to refer to the large category of applications and protocols that are constructed on top of complex and linked computer networks These networks provide services to billions of users all over the globe in a manner that is available around the clock Indeed we are at the beginning of a new age in which ubiquitous communication and connection are no longer a fantasy or a problem This era is only starting to emerge Following this the emphasis has switched toward a seamless integration of people and gadgets in order to combine the physical world with virtual environments that have been created by humans so building the so called Internet of Things IoT utopia An examination of this phenomena in further detail shows two essential pillars of the Internet of Things Internet and Things both of which need further elaboration This notation is used to encompass a more general set of entities such as smart devices sensors human beings and any other object that is aware of its context and is able to communicate with other entities making it accessible at anytime and anywhere Although it may appear that every object that is capable of connecting to the Internet will fall into the Things category this notation is used to encompass a more general set of entities This suggests that there should be no constraints placed on the accessibility of the items either in terms of time or location One of the most important requirements of the Internet of Things is ubiquitous connectivity In order to meet this requirement applications need to be able to support a wide variety of devices and communication protocols These devices range from small sensors that are able to detect and report a desired factor to

powerful back end servers that are used for data analysis and knowledge extraction In order to do this it is necessary to include mobile devices edge devices such as routers and smart hubs and human controllers into the system Telèma ,2000
