Monge-Ampère Equations and Related Topics Francesco Gherardelli, 1982 *Monge-Ampère equations and related topics* Francesco Gherardelli, Istituto nazionale di alta matematica Francesco Severi, 1982 **Equadiff 6** Jaromir Vosmanský, Milos Zlamal, 2006-11-14 **Hyperbolic Equations and Related Topics** Shigeru Mizohata, 1986 **Convex Bodies: The Brunn-Minkowski Theory** Rolf Schneider, 2013-10-31 At the heart of this monograph is the Brunn Minkowski theory which can be used to great effect in studying such ideas as volume and surface area and their generalizations In particular the notions of mixed volume and mixed area measure arise naturally and the fundamental inequalities that are satisfied by mixed volumes are considered here in detail The author presents a comprehensive introduction to convex bodies including full proofs for some deeper theorems The book provides hints and pointers to connections with other fields and an exhaustive reference list This second edition has been considerably expanded to reflect the rapid developments of the past two decades It includes new chapters on valuations on convex bodies on extensions like the L_p Brunn Minkowski theory and on affine constructions and inequalities There are also many supplements and updates to the original chapters and a substantial expansion of chapter notes and references [Convex Analysis and Nonlinear Geometric Elliptic Equations](#) Ilya J. Bakelman, 2012-12-06 Investigations in modern nonlinear analysis rely on ideas methods and problems from various fields of mathematics mechanics physics and other applied sciences In the second half of the twentieth century many prominent exemplary problems in nonlinear analysis were subject to intensive study and examination The united ideas and methods of differential geometry topology differential equations and functional analysis as well as other areas of research in mathematics were successfully applied towards the complete solution of complex problems in nonlinear analysis It is not possible to encompass in the scope of one book all concepts ideas methods and results related to nonlinear analysis Therefore we shall restrict ourselves in this monograph to nonlinear elliptic boundary value problems as well as global geometric problems In order that we may examine these problems we are provided with a fundamental vehicle The theory of convex bodies and hypersurfaces In this book we systematically present a series of centrally significant results obtained in the second half of the twentieth century up to the present time Particular attention is given to profound interconnections between various divisions in nonlinear analysis The theory of convex functions and bodies plays a crucial role because the ellipticity of differential equations is closely connected with the local and global convexity properties of their solutions Therefore it is necessary to have a sufficiently large amount of material devoted to the theory of convex bodies and functions and their connections with partial differential equations [Handbook of Geometric Analysis](#) Lizhen Ji, 2008 Geometric Analysis combines differential equations with differential geometry An important aspect of geometric analysis is to approach geometric problems by studying differential equations Besides some known linear differential operators such as the Laplace operator many differential equations arising from differential geometry are nonlinear A particularly important example is the

Monge Ampere equation Applications to geometric problems have also motivated new methods and techniques in differential equations The field of geometric analysis is broad and has had many striking applications This handbook of geometric analysis the first of the two to be published in the ALM series presents introductions and survey papers treating important topics in geometric analysis with their applications to related fields It can be used as a reference by graduate students and by researchers in related areas Back cover

Variational Methods for Free Surface Interfaces Paul Concus, Robert Finn, 2012-12-06 Vallombrosa Center was host during the week September 7 12 1985 to about 40 mathematicians physical scientists and engineers who share a common interest in free surface phenomena This volume includes a selection of contributions by participants and also a few papers by interested scientists who were unable to attend in person Although a proceedings volume cannot recapture entirely the stimulus of personal interaction that ultimately is the best justification for such a gathering we do offer what we hope is a representative sampling of the contributions indicating something of the varied and interrelated ways with which these classical but largely unsettled questions are currently being attacked For the participants and also for other specialists the 23 papers that follow should help to establish and to maintain the new ideas and insights that were presented as active working tools Much of the material will certainly be of interest also for a broader audience as it impinges and overlaps with varying directions of scientific development On behalf of the organizing committee we thank the speakers for excellent well prepared lectures Additionally the many lively informal discussions did much to contribute to the success of the conference
