

Monterey Formation

- The Monterey Bay was formed during the Miocene Era in between 16 and 6 million years ago during a period where the Earth was cooling down (The Mighty Monterey Formation, 2012)
- Coastal upwelling happened all around the California coast due to the great current system reorganizing itself.
- Diatoms, a single celled algae, collected on the bottom of the sea. Their silica-shelled bodies were preserved on the zero oxygen sea bed turning them into petroleum, oil and gas. (The Mighty Monterey Formation, 2012)
- At the same time, their shells turned into quartz.
- The rocks changed from Diatomite to porcellanite and later into chert. As the rock changed, room was given for the oil to move around.
- The San Andreas fault system bent the rock into domes and folds creating reservoirs for the oil. (Monterey Shale, 2013)

Monterey Formation From Rocks To Molecules:

The Monterey Formation Caroline M. Isaacs, 2001 Provides an extraordinary case study of a classic marine petroleum system in the prolific oil basins of California Based on results from the Cooperative Monterey Organic Chemistry Study the volume examines paleoenvironmental conditions organic matter deposition source rock characteristics thermal maturation and oil generation in the Monterey Formation *The Biomarker Guide* K. E. Peters, C. C. Walters, J. M. Moldowan, 2005 The second edition of *The Biomarker Guide* is a fully updated and expanded version of this essential reference Now in two volumes it provides a comprehensive account of the role that biomarker technology plays both in petroleum exploration and in understanding Earth history and processes Biomarkers and Isotopes in Petroleum Exploration and Earth History itemizes parameters used to genetically correlate petroleum and interpret thermal maturity and extent of biodegradation It documents most known petroleum systems by geologic age throughout Earth history *The Biomarker Guide* is an invaluable resource for geologists petroleum geochemists biogeochemists and environmental scientists **Classic Cordilleran**

Concepts Eldridge M. Moores, Doris Sloan, Dorothy L. Stout, 1999-01-01 **Biogeochemistry** W.H. Schlesinger, 2005-06-08 The *Treatise on Geochemistry* is the first work providing a comprehensive integrated summary of the present state of geochemistry It deals with all the major subjects in the field ranging from the chemistry of the solar system to environmental geochemistry The *Treatise on Geochemistry* has drawn on the expertise of outstanding scientists throughout the world creating the reference work in geochemistry for the next decade Each volume consists of fifteen to twenty five chapters written by recognized authorities in their fields and chosen by the Volume Editors in consultation with the Executive Editors Particular emphasis has been placed on integrating the subject matter of the individual chapters and volumes Elsevier also offers the *Treatise on Geochemistry* in electronic format via the online platform ScienceDirect the most comprehensive database of academic research on the Internet today enhanced by a suite of sophisticated linking searching and retrieval tools **New Publications of the Geological Survey** Geological Survey (U.S.), 2003 **New Publications of the U.S. Geological Survey** Geological Survey (U.S.), 2002 *New Publications of the U.S. Geological Survey*, 2003

Knauer, 2009 **Authigenic Mineral Formation in the Marine Environment**, 2007 **The Deposition of Organic-carbon-rich Sediments** Nicholas Bennett Harris, 2005 Depositional models for organic carbon rich sediments have been the subjects of both great interest and great controversy for many years These sediments serve as the ultimate source of virtually all oil and gas They also represent the interface between biological and geological processes and provide critical evidence for the state of the atmosphere and oceans Yet despite their importance and decades of research the origin of these sediments remains the source of vigorous disagreement The twelve papers in this volume represent the cutting edge of research in this topic They explore the origin of organic carbon rich sediments through a variety of techniques including sedimentology geochemistry paleontology and

computer modeling All papers take multidisciplinary approaches to the topic and together they demonstrate the complex interconnected processes that trigger the deposition of organic carbon This book will appeal to geoscientists in many disciplines including explorers for petroleum who need models for source rock deposition organic and inorganic geochemists who study processes in water and sediment sedimentologists who interpret ancient deposition environments and climatologists and oceanographers who reconstruct the behavior of the ancient atmosphere and oceans Journal of Vertebrate Paleontology ,2000 *Geological Quarterly* ,2012 **Magnetic Stratigraphy of the Pacific Coast Cenozoic** Donald R.
