It represents one of the world's most important sites. It is the origin of thousands of late Jurassic fossil remains, some belonging to most popular dinosaurs. It is located in the United States and contains rocks that were deposited under an arid climate with seasonal rains.

**WILLIAM**  
Towards the end of the 19th century, the Morrison Formation was the site of the first large-scale paleontological excavations. The first of these was the discovery of the first of the great amount of fossils.

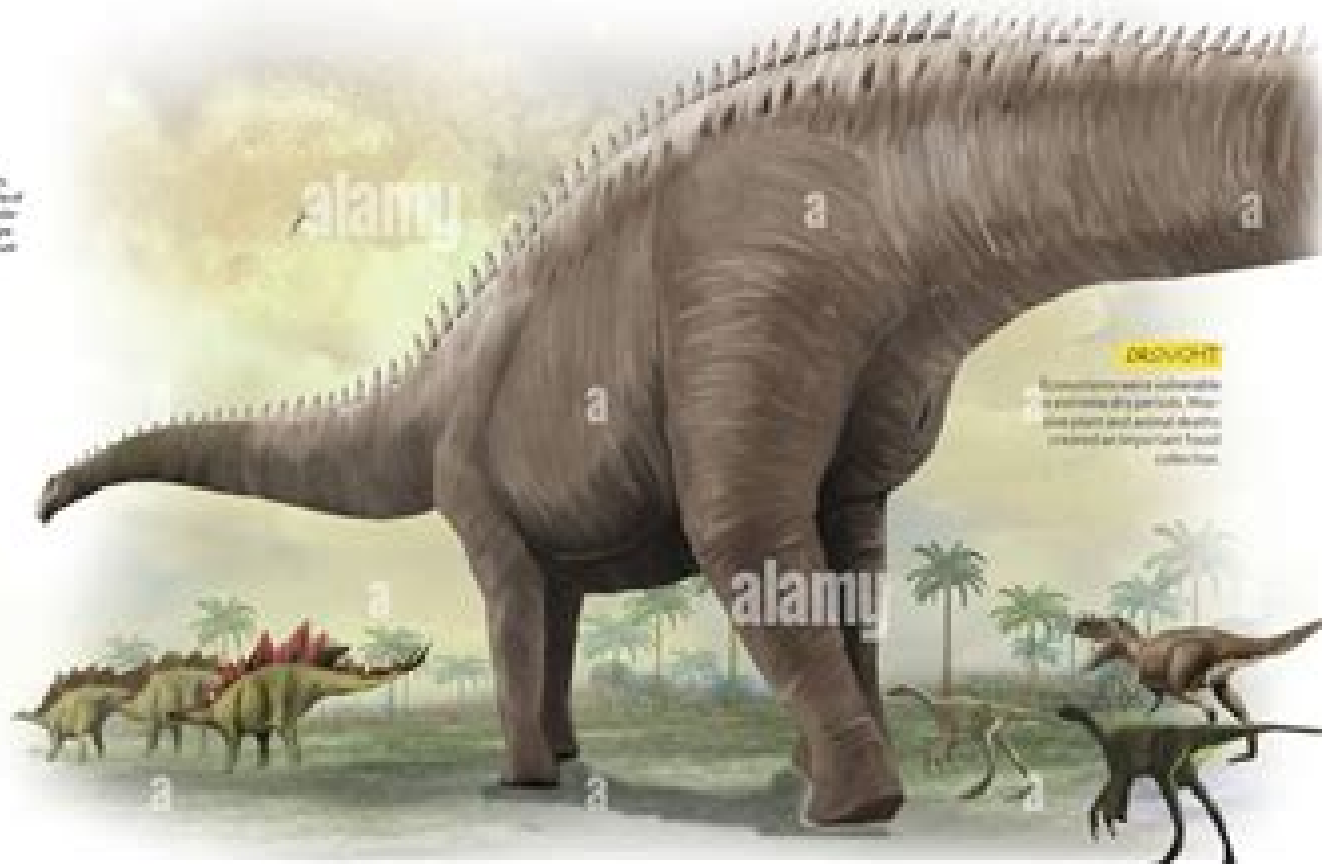

**WILLIAM**  
The fossils, deposited in a hard rock of the same age, are evidence of complex and extensive fossil deposits affected by frequent cycles of erosion and deposition, which created the Morrison Formation of fossil bones.
