Most Probable World:

Searching Merrelyn Emery, 1999-12-15 Searching explains how to make the fundamental cultural change required for a desirable sustainable future. It describes the two stage model of open systems social science in action and covers two major methods: the Search Conference for strategic planning and community development and the Participative Design Workshop for the genotypical design and redesign of organizational structures. The result of nearly 50 years of integrated conceptual and practical development, Searching shows that by replacing 200 years of mechanistic assumptions with concepts and principles which accurately capture human and social realities, these methods generate intrinsic motivation and release human potentials for change. Starting with the building blocks of this internally consistent theoretical framework, Part I explains the interrelations and shows how the power of the methods for achieving this cultural change is generated. Part II of the book describes the methods and illustrates their flexibility by discussing some of their most common variations.

The Natural Problem of Consciousness Pietro Snider, 2017-06-12 The Natural Problem of Consciousness is the problem of understanding why there are presently conscious beings at all. Given a non-reductive naturalist framework taking consciousness as an ontologically subjective biological phenomenon, how can we

rationality explain the fact that the actual world has turned out to be one where there are presently living beings that can feel rather than having developed as a zombie world in which there would be no conscious experiences of any kind This book introduces the Natural Problem by relating it to central problems in the philosophy of mind metaphysical mind body problem Hard Problem of consciousness and emphasizing the distinctive interest of its diachronic dimension Ranging from philosophy to biology and neuroscience it offers a thorough analysis aimed at better understanding what could explain why phenomenal consciousness has been preserved throughout evolution by natural selection This is an original engaging and thought provoking philosophical study of a neglected but fundamental question regarding the nature and origin of consciousness
