Stefanski,1995-07-06 This monograph provides an up to date discussion of analysis strategies for regression problems in which predictor variables are measured with errors The analysis of nonlinear regression models includes generalized linear models transform both sides models and quasilielihood and variance function problems The text concentrates on the general ideas and strategies of estimation and inference rather than being concerned with a specific problem Measurement error occurs in many fields such as biometry epidemiology and economics In particular the book contains a large number of epidemiological examples An outline of strategies for handling progressively more difficult problems is also provided

**Instrumental Variable Estimation of Nonlinear Models with Nonclassical Measurement Error Using Control Variable** Jinyong Hahn,Geert Ridder,2016 We consider nonlinear parametric models with an independent variable that is measured with error The measurement error can be correlated with the true value i e the measurement error is allowed to be nonclassical We propose a control variable estimator for the parameters of interest The estimator is consistent even if the latent true value is endogenous We derive the influence function of the semi parametric estimator that accounts for the estimation of the control variable in the first stage

Identification and Inference of Nonlinear Models Using Two Samples with Arbitrary Measurement Errors

Xiaohong Chen, 2006 This paper considers identification and inference of a general latent nonlinear model using two samples where a covariate contains arbitrary measurement errors in both samples and neither sample contains an accurate measurement of the corresponding true variable The primary sample consists of some dependent variables some error free covariates and an error ridden covariate where the measurement error has unknown distribution and could be arbitrarily correlated with the latent true values The auxiliary sample consists of another noisy measurement of the mismeasured covariate and some error free covariates We first show that a general latent nonlinear model is nonparametrically identified using the two samples when both could have nonclassical errors with no requirement of instrumental variables nor independence between the two samples When the two samples are independent and the latent nonlinear model is parameterized we propose sieve quasi maximum likelihood estimation MLE for the parameter of interest and establish its root  $n$  consistency and asymptotic normality under possible misspecification and its semiparametric efficiency under correct specification We also provide a sieve likelihood ratio model selection test to compare two possibly misspecified parametric latent models A small Monte Carlo simulation and an empirical example are presented *Regression Analysis of Count Data* Adrian Colin Cameron, Pravin K. Trivedi, 2013-05-27 This book provides the most comprehensive and up to date account of regression methods to explain the frequency of events Regression Analysis of Count Data A. Colin Cameron, Pravin K. Trivedi, 2013-05-27 Students in both social and natural sciences often seek regression methods to explain the frequency of events such as visits to a doctor auto accidents or new patents awarded This book now in its second edition provides the most comprehensive and up to date account of models and methods to interpret such data The authors combine theory and practice to make sophisticated methods of analysis accessible to researchers and practitioners working with widely different types of data and software in areas such as applied statistics econometrics marketing operations research actuarial studies demography biostatistics and quantitative social sciences The new material includes new theoretical topics an updated and expanded treatment of cross section models coverage of bootstrap based and simulation based inference expanded treatment of time series multivariate and panel data expanded treatment of endogenous regressors coverage of quantile count regression and a new chapter on Bayesian methods Endogeneity and Measurement Error in Nonparametric and Semiparametric Models Suyong Song, 2010 It has long been an area of interest to consider a consistent estimation of nonlinear models with measurement error or endogeneity in the explanatory variables Contrast to linear parametric models both topics in nonlinear models are difficult to correct for As a result many of studies have addressed only one of them in nonlinear models although controlling for only one mostly fails to identify economically meaningful structural parameters Thus this dissertation presents solutions to simultaneously control for both endogeneity and measurement error in general nonlinear regression models Chapter one of this dissertation studies the identification and estimation of covariate conditioned average marginal effects of endogenous regressors in nonseparable models when the regressors are

mismeasured Endogeneity is controlled for by making use of covariates as conditioning instruments this ensures independence between the endogenous causes and other unobservable drivers of the dependent variable Moreover distributions of the underlying true causes from their error laden measurements are recovered Specifically it is shown that two error laden measurements of the unobserved true causes are sufficient to identify objects of interest and to deliver consistent estimators Chapter two develops semiparametric estimation of models defined by conditional moment restrictions where the unknown functions depend on endogenous variables which are contaminated by nonclassical measurement errors A two stage estimation procedure is proposed to recover the true conditional density of endogenous variables given conditioning variables masked by measurement errors and to rectify the difficulty associated with endogeneity of the unknown functions Chapter three investigates empirical importance of endogeneity and measurement error in economic examples The proposed methods in chapter one and two are applied to topics of interest the impact of family income on children s achievement and the estimation of Engel curves respectively The first application finds that the effects of family income on both math and reading scores from the proposed estimator are positive and that the magnitudes of the income effects are substantially larger than previously recognized From the second application findings indicate that correcting for both endogeneity and measurement error obtains significantly different shapes of Engel curves compared to the method which ignores measurement error on total expenditure

Statistical Analysis of Measurement Error Models and Applications Philip J. Brown, Wayne A. Fuller, American Mathematical Society, 1990 Measurement error models describe functional relationships among variables observed subject to random errors of measurement This book treats general aspects of the measurement problem and features a discussion of the history of measurement error models
