MONO BASIN ECOSYSTEM

Effects of Changing Lake Level

Mono Basin Ecosystem

Harold Mooney, Erika Zavaleta

Mono Basin Ecosystem:

The Mono Basin Ecosystem National Research Council, Division on Engineering and Physical Sciences, Commission on Physical Sciences, Mathematics, and Applications, Board on Environmental Studies and Toxicology, Mono Basin Ecosystem Study Committee, 1987-02-01 Mono Basin is a closed hydrologic basin spanning the border between California and Nevada. Los Angeles has been diverting streams since 1941 that normally would flow into Mono Lake. It has been predicted that continued diversion will have major ecological consequences for the natural resources of the Mono Basin National Forest Scenic Area. This book studies the ecological risk assessment that considers the effects of water diversions on an inland saline lake. It examines the hydrology of the Mono Basin, investigates the lake's physical and chemical systems, studies the biological relationships, and predicts the effects of changes in lake levels on the ecosystem. Ecosystems, Cultures, and Connections Kristen P. Patterson, 2004

Ecosystems of California Harold Mooney, Erika Zavaleta, 2016-01-19 This long anticipated reference and sourcebook for California's remarkable ecological abundance provides an integrated assessment of each major ecosystem type, its distribution, structure, function, and management. A comprehensive synthesis of our knowledge about this biologically diverse state, *Ecosystems of California* covers the state from oceans to mountaintops using multiple lenses: past and present flora and fauna, aquatic and terrestrial, natural and managed. Each chapter evaluates natural processes for a specific ecosystem, describes drivers of change, and discusses how that ecosystem may be altered in the future. This book also explores the drivers of California's ecological patterns and the history of the state's various ecosystems, outlining how the challenges of climate change and invasive species and opportunities for regulation and stewardship could potentially affect the state's ecosystems. The text explicitly incorporates both human impacts and conservation and restoration efforts and shows how ecosystems support human well-being. Edited by two esteemed ecosystem ecologists and with overviews by leading experts on each ecosystem, this definitive work will be indispensable for natural resource management and conservation professionals as well as for undergraduate or graduate students of California's environment and curious naturalists. *Ecology of Meromictic Lakes* Ramesh D. Gulati, Egor S. Zadereev, Andrei G. Degermendzhi, 2017-02-22 This volume presents recent advances in the research on meromictic lakes and a state-of-the-art overview of this area. After an introduction to the terminology and geographic distribution of meromictic lakes, three concise chapters describe their physical, chemical, and biological features. The following eight chapters present case studies of more than a dozen meromictic lakes, showing the variety of physical and biochemical processes that promote meromixis. The result is a broad picture of the ecology and biochemistry of meromictic lakes in tropical and cold regions, in man-made pit lakes and euxinic marine lakes, and in freshwater as well as hypersaline lakes. In the final chapter, the editors provide a synthesis of the topic and conclude that the study of meromictic lakes also offers new insights into the limnology of inland lakes. The book appeals to researchers in the fields of ecology, limnology, environmental physics, and biophysics. *Opportunities in Applied Environmental Research*

and Development National Research Council, Division on Earth and Life Studies, Commission on Geosciences, Environment and Resources, Committee on Opportunities in Applied Environmental Research and Development, 1991-01-01 Research is the foundation of environmental protection This volume reviews four areas of opportunity in applied environmental research and development waste reduction ecosystem and landscape change anticipatory research and long term chemical toxicity It presents the consensus of workshops held to explore these four areas as well as an introductory chapter that summarizes the committee's view of environmental research and development

Law and Ecology Richard O. Brooks, Ross Jones, 2017-07-05 In 1970 Earth Day was first celebrated marking the dawn of worldwide environmental consciousness and the passing of many environmental laws In part these events were the result of the maturing of the science of ecology which recognized the interdependence of the web and cycles of nature This volume explores the relationship between ecology and environmental law beginning with a description of the two very different disciplines This description is followed by a history of their episodic interactions the early period of origin the mid century formative period from 1950 to 1970 the initial serious period of interaction after Earth Day in 1970 and the testing of the relationship during the next two decades Utilizing a number of case studies examinations of the key linkage persons legal instruments and the migration of ecological concepts and frameworks this book analyzes the final flowering of an ecosystem regime which embraces the connections between the two disciplines of ecology and environmental law Concluding with an inventory of the problems posed by the relationship between the two disciplines and an agenda for future research this clearly structured comprehensive and stringent book is an essential resource for all serious scholars and students of ecology and environmental law

Deep Time in the Mono Lake Basin Robert B. Marks, 2026-05-19 Ten millennia in the Mono Lake Basin showing how this complex ecosystem came to be what it is today Nestled at the base of the Sierra Nevada in eastern California sits a stunning landscape overlooking a saline lake with picturesque tufa towers and flocks of phalarope birds This is the Mono Lake Basin In this sweeping history Robert B Marks examines the forces that have shaped the Mono Lake Basin's rich ecosystem The story starts with the region's Indigenous peoples It then traces the mid nineteenth century arrival of Euro American settlers and the dispossession of the Kootzaduka a people of their land A struggle for control over water led to hydroelectric development and the sale of land and water rights to Los Angeles diverting nearly all fresh water out of the basin and precipitating an ecological crisis by the 1970s The ecological restoration movement that resulted has for now successfully preserved the Mono Lake Basin As Marks shows the basin reveals a larger story of how human actions and natural forces shape the environment A dramatic and ultimately hopeful environmental history Deep Time in the Mono Lake Basin explores a beloved region to illuminate questions of water power and our relationship with the natural world that echo far beyond the American West
