**Morphological Integration** Everett Claire Olson, Robert Lee Miller, 1958      *Morphological Integration* Everett C. Olson, Robert L. Miller, 1999-10 Despite recent advances in genetics development anatomy systematics and morphometrics the synthesis of ideas and research agenda put forth in the classic *Morphological Integration* remains remarkably fresh timely and relevant Pioneers in reexamining morphology Everett Olson and Robert Miller were among the first to explore the concept of the integrated organism in both living and extinct populations In a new foreword and afterword biologists Barry Chernoff and Paul Magwene summarize the landmark achievements made by Olson and Miller and bring matters discussed in the book up to date suggest new methods and accentuate the importance of continued research in morphological integration Everett C Olson was a professor at the University of Chicago and at the University of California Los Angeles He was a former president of the Society of Vertebrate Paleontology Robert L Miller was associate professor of geology at the University of Chicago associate scientist in marine geology at the Woods Hole Oceanographic Institution and a member of the board of editors of the *Journal of Geology*      *Evolution and Biocomputation* Wolfgang Banzhaf, Frank H. Eckman, 1995-03-06 This volume comprises ten thoroughly refereed and revised full papers originating from an interdisciplinary workshop on biocomputation entitled *Evolution as a Computational Process* held in Monterey California in July 1992 This book is devoted to viewing biological evolution as a giant computational process being carried out over a vast spatial and temporal scale Computer scientists mathematicians and physicists may learn about optimization from looking at natural evolution and biologists may learn about evolution from studying artificial life game theory and mathematical optimization In addition to the ten full papers addressing e g population genetics emergence artificial life self organization evolutionary algorithms and selection there is an introductory survey and a subject index      **Tinkering** Gregory R. Bock, Jamie A. Goode, 2007-06-13 Much recent research in evolutionary developmental biology has focused on the origin of new body plans However most evolutionary change at the population and species level consists of tinkering small scale alterations in developmental pathways within a single body plan Such microevolutionary events have been well studied on a population genetic level and from the perspective of adaptive phenotypic evolution but their developmental mechanisms remain poorly studied This book explores both theoretical and practical issues of tinkering It features a wide range of perspectives to address several fundamental questions How does tinkering occur developmentally and how is it manifested phenotypically Are the developmental mechanisms by which tinkering occur different from those that underlie larger evolutionary changes What are the developmental constraints on tinkering And how do we test hypotheses about microevolutionary shifts in development from the fossil record With contributions from experts in a range of fields this fascinating book makes exciting reading for anyone studying evolution developmental biology or genetics      **The Evolutionary Biology of the Human Pelvis** Cara M. Wall-Scheffler, Helen K. Kurki, Benjamin M. Auerbach, 2020-01-16

Synthesizes and re examines the evolution of the human pelvis which sits at the interface between locomotion and childbirth  
Advances in Trilobite Research Isabel Rábano,D. García-Bellido,2008      *Carnivoran Evolution* Anjali Goswami,Anthony Friscia,2010-07-29 Members of the mammalian clade Carnivora have invaded nearly every continent and ocean evolving into bamboo eating pandas clam eating walruses and of course flesh eating sabre toothed cats With this ecological morphological and taxonomic diversity and a fossil record spanning over sixty million years Carnivora has proven to be a model clade for addressing questions of broad evolutionary significance This volume brings together top international scientists with contributions that focus on current advances in our understanding of carnivoran relationships ecomorphology and macroevolutionary patterns Topics range from the palaeoecology of the earliest fossil carnivorans to the influences of competition and constraint on diversity and biogeographic distributions Several studies address ecomorphological convergences among carnivorans and other mammals with morphometric and Finite Element analyses while others consider how new molecular and palaeontological data have changed our understanding of carnivoran phylogeny Combined these studies also illustrate the diverse suite of approaches and questions in evolutionary biology and palaeontology

**Wiley-Blackwell Student Dictionary of Human Evolution** Bernard Wood,2015-02-23 Not so long ago all a student studying human evolution needed was a familiarity with the relatively sparse fossil record and what limited information there was about the context of the sites a basic knowledge of gross anatomy and archeology and an understanding of simple analytical methods Times have changed The fossil record has grown exponentially imaging techniques have advanced dramatically quantitative methods have burgeoned and molecular biology has revolutionized our understanding of genetics evolutionary history and development Added to this are advances in the archeological biological and earth sciences that help interpret the context of the fossil evidence and reconstruct behavior But presently there is nowhere students of human evolution can easily find out about topics as disparate as ameloblast Coopers Cave daily secretion rate the effect hypothesis homeobox genes insolation phylogenetically independent contrasts quantitative trait locus semicircular canals and tephrostratigraphy The Wiley Blackwell Student Dictionary of Human Evolution contains upwards of 2500 entries all drafted with an eye on the student user It is an indispensable source for those studying human evolution      **Small animal imaging: Technological and methodological advances to improve the translational power** Monique R.
