Carnegie Institution of Washington, 1927 **Species, Science and Society** Quentin Wheeler, 2023-07-06 This book presents an engaging and accessible examination of the role of systematic biology in species exploration and biodiversity conservation.

Our planet and systematic biology are at a crossroads Millions of species face an imminent threat of extinction and with knowledge of only a fraction of earth's species we are unprepared to respond Species Science and Society explains what is at stake if we continue to ignore the traditional mission of systematics Rejecting claims that it is too late to document earth's species that molecular evidence is sufficient and that comparative morphology and the grand traditions of systematics are outdated this book makes a compelling argument for a taxonomic renaissance The book challenges readers to rethink assumptions about systematics Shattering myths and misconceptions and clarifying the role of systematics in confronting mass extinction it hopes to inspire a new generation of systematists Readers are given a deeply personal view of the mission motivations and rewards of systematic biology Written in narrative style with passion wit and optimism it is the first book to question the growing dominance of molecular data defend descriptive taxonomy and propose a mission to discover describe and classify all species Our evolutionary heritage the fate of society and the future of the planet depend on what we do next This book will be of great interest to academics researchers and professionals working in systematics taxonomy and biodiversity conservation as well as students with a basic background in biology

Mark Aronoff, 1992-01-01 Several distinct general linguistic theories are represented here autolexical theory categorial grammar functional grammar and government and binding syntax Each essay in this book is centered around a point of morphological theory and each one is designed to further the development of that theory and hence linguistic theory in general Many different languages are analyzed Sino Tibetan Manipuri Eskimo Central Siberian Upik Athabaskan Ahtna Latin modern European languages and English All of these sometimes dramatically different language systems are treated as manifestations of a single unified human language faculty and these studies of generative morphology are incorporated into linguistic theory and the explanation of diversity in human language
