those who are now and those who intend to become clinical teachers in the health professions Its primary focus is the  
teaching of medical students and residents but the principles discussed apply equally to teaching students in other health  
professions The main focus is on the process of teaching the strategies and tactics involved in helping others learn and the  
authors discuss the generic steps strategies and principles of effective teaching that apply in any clinical setting They do  
however draw numerous examples from clinical education in a variety of settings The authors specifically stress the notion of  
collaboration an issue closely related to the public s considerable dissatisfaction with the modern health care system to  
create a more effective responsive system they argue there is a need to change the ways that health care is provided and the  
way it is taught A collaborative approach is needed in both health care and medical education one that involves partnerships  
between clinicians and patients and between teachers and learners Also prominent throughout the book is the idea that  
clinical education can be planned and conducted in far more systematic ways than is now common An overarching goal of the  
book is to provide readers with an enlarged set of options to consider using when faced with the inevitable multiplicity of  
decisions confronting clinical educators      Conference on Research in Medical Education ,1982      **Annual Conference**
