Materials Aspects In Automotive Catalytic Converters:

Materials Aspects in Automotive Catalytic Converters Hans Bode, Deutsche Gesellschaft für Materialkunde, 2002-06-10 MACC 2001 is the successor meeting of the first international conference on Materials Aspects in Automotive Catalytic Converters MACC 97 and concentrates on the high temperature mechanical and oxidation behaviour of both metal supported and ceramic supported automotive catalysts The metal supported catalyst is based on a ferritic steel with 5.8% aluminium 17.22% chromium and small additions of reactive elements More than 20 000 000 units were produced in 1999 The ceramic supported catalytic converter is based on cordierite The production rate of ceramic supported catalysts is much higher Both materials have specific advantages and disadvantages which determine the application for a given car model In addition to these two basic groups of catalytic carriers the scope of the conference also refers to coating aspects since the influence of the coating composition is becoming more and more important The car and car supplying industries report on their future requirements with respect to performance and service life Maintaining good performance is mandatory particularly in the view of thinner supports and higher temperatures Service life predictions based on modelling and simulation techniques will depend on reliable materials data This volume will therefore be invaluable to all scientists and engineers involved in the design and development of automotive catalysts Materials & Components in Fossil Energy Applications , **Electroplating** Darwin Sebayang, Sulaiman Hasan, 2012-04-11 This book emphasizes on new applications of electroplating with consideration for environmental aspect and experimental design Written by experienced expert from various countries the authors come from academia and electroplating industrial players Here a very detailed explanation to the new application of the electroplating is followed by a solution of the environmental issue caused by the electroplating process and concluded by experimental design for optimization of electro deposition processes Coverage included 1 Preparation NiO catalyst on FeCrAl Substrate Using Various Technique at Higher Oxidation Process 2 Electrochemical properties of carbon supported metal nanoparticle prepared by electroplating methods 3 Fabrication of InGaN Based Vertical Light Emitting Diodes Using Electroplating 4 Integration Of Electrografted Layers for the Metallization of Deep Through Silicon Vias 5 Biomass adsorbent for removal of toxic metal ions from electroplating industry wastewater 6 Resistant fungal biodiversity of electroplating effluent and their metal tolerance index 7 Experimental design and response surface analysis as available tools for statistical modeling and optimization of electrodeposition processes *Materials and Technologies in Modern Production* Shankar Sehgal, Velaphi Msomi, Omar S.
