Tuberculosis TB is a disease caused by bacteria that are spread from person to person through the air TB usually affects the lungs but it can also affect other parts of the body such as the brain the kidneys or the spine In most cases TB is treatable and curable however persons with TB can die if they do not get proper treatment Multidrug resistant TB MDR TB is caused by an organism that is resistant to at least isoniazid and rifampin the two most potent TB drugs These drugs are used to treat all persons with TB disease *Addressing the Threat of Drug-Resistant Tuberculosis* Institute of Medicine,2010-01-07

Tuberculosis is one of the leading causes of death in the world today with 4 500 people dying from the disease every day Many cases of TB can be cured by available antibiotics but some TB is resistant to multiple drugs a major and growing threat worldwide The Institute of Medicine s Forum on Drug Discovery Development and Translation hosted a workshop on November 5 2008 to address the mounting concern of drug resistant TB The session brought together a wide range of international experts to discuss what is known and not known about this growing threat and to explore possible solutions

To effectively treat patients diagnosed with drug resistant DR tuberculosis TB and protect the population from further transmission of this infectious disease an uninterrupted supply of quality assured QA second line anti TB drugs SLDs is necessary Patients diagnosed with multidrug resistant tuberculosis MDR TB a disease caused by strains of Mycobacterium tuberculosis M tb resistant to two primary TB drugs isoniazid and rifampicin face lengthy treatment regimens of 2 years or more with daily directly observed treatment DOT with SLDs that are less potent more toxic and more expensive than those used to treat drug susceptible TB From 2000 to 2009 only 0 2 0 5 percent of the estimated 5 million MDR TB cases globally were treated with drugs of known quality and in programs capable of delivering appropriate care Keshavjee 2012 The vast majority of MDR TB patients either died from lack of treatment or contributed to the spread of MDR TB in their communities A strengthened global supply chain for SLDs could save lives by consistently delivering high quality medicines to more of the people who need them This public workshop explored innovative solutions to the problem of how to get the right SLDs for

MDR TB to people who critically need them More specifically the workshop examined current problems and potential opportunities for coordinated international efforts to ensure that a reliable and affordable supply of high quality SLDs is available Developing and Strengthening the Global Supply Chain for Second Line Drugs for Multidrug Resistant Tuberculosis Workshop Summary covers the objectives of the workshop which were to review To what extent and in what ways current mechanisms are or are not effectively accomplishing what is needed including consideration of bottlenecks The advantages and disadvantages of centralization in the management of the global drug supply chain and potential decentralized approaches to improve operations of the supply chain What can be learned from case studies and examples from other diseases e g the Affordable Medicines Facility malaria AMFm and the U S President s Emergency Plan for AIDS Relief PEPFAR The current allocation of responsibilities and roles of the private including industry and nonprofit public health organizations and public sectors and examination of opportunities for enhancing and optimizing collaboration Identification of potential innovative solutions to the problem

Resistant Tuberculosis in Russia A Global and Local Perspective Summary of a Joint Workshop presents information from experts on the nature of this threat and how it can be addressed by exploring various treatment and diagnostic options

**National Action Plan for Combating Multidrug-Resistant Tuberculosis** White House,2016-02-17 Tuberculosis TB kills almost 30 000 people each week The disease is caused by Mycobacterium tuberculosis Mtb which is transmitted through the air from person to person Currently more than two billion people nearly one third of the world s population are estimated to be infected with Mtb latent TB and are at risk of developing the disease TB is curable but inappropriate treatment can lead to multidrug resistant TB MDR TB which is resistant to the two most effective anti TB drugs and extensively drug resistant TB XDR TB which is resistant to many anti TB drugs The goals of this National Action Plan are to 1 Strengthen domestic capacity to combat MDR TB 2 Improve international capacity and collaboration to combat MDR TB and 3 Accelerate basic and applied R D to combat MDR TB Figures This is a print on demand report [Timebomb:The Global Epidemic of Multi-Drug Resistant Tuberculosis](#) Lee Reichman,Janice Hopkins Tanne,2001-11-05 This is an excellent book It should be read by all who are interested in any aspect of Tuberculosis including the growing problem of Multi Drug Resistant Tuberculosis Journal of American Medical Association The book serves an important function relaying statistics and TB hot spots proposing funding and international standardized treatments Government officials researchers and nonprofit health organizations will likely cast this as the authoritative book on the subject Publishers Weekly Like other recent works on the threat of infectious diseases such as Laurie Garrett s The Coming Plague Timebomb has the power of fiction and it is sometimes easy to forget that it is not Unlike the Garrett book which is more a collection of short dramatic stories collectively telling a big picture about our coexistence and evolution with microbes Reichman selects one story and presents it in novel form with better material than most science fiction The book is organized in a clear and riveting manner Within the narrative style the book is rich with up to the minute details and references that add to its depth An incredible account of politics and disease dynamics occurring at all levels Timebomb helps us realize that controlling or eradicating TB is not just about science and facts likely if it were TB would have long been relegated to the history books Nature Medicine Magazine Tuberculosis supposedly defeated by antibiotics half a century ago has returned in a highly contagious and fatal new form that cannot be treated with conventional drugs Multidrug resistant TB MDR TB could cause some 10 million deaths over the next decade and is thriving in the overcrowded prisons of the former Soviet Union As Timebomb explains in unnerving detail the virtual collapse of the world s borders means that refugees tourists immigrants business travelers and others can spread the TB bacillus very efficiently London for example has experienced a 100% increase in reported cases in the past 10 years Written by the world s preeminent TB expert and an award winning medical and health writer Timebomb details the evolution and the current state of the MDR TB epidemic interweaving the science of MDR TB with personal stories of people whose lives have been threatened by the deadly bacteria **Guidelines for the Programmatic Management of Drug-resistant**

**Tuberculosis** World Health Organization, 2008 The emergence of extensively drug resistant strains of tuberculosis especially in countries with a high prevalence of human immunodeficiency virus is a serious threat to global public health and jeopardizes efforts to effectively control the disease This publication offers updated recommendations for the diagnosis and management of drug resistant tuberculosis in a variety of geographical economic and social settings and the recording of data that enables the monitoring and evaluation of programs Publisher's description **Multidrug Resistant**

resistant to at least isoniazid and rifampin the two most potent TB drugs      *Tuberculosis and Multidrug-Resistant Tuberculosis* Suhail Ahmad,Eiman Mokaddas,2013-01-01 Tuberculosis TB causing nine million active disease cases and 1.5 million deaths every year is a formidable public health challenge particularly in poor and developing countries around the world Major reasons for global burden of TB include association of active disease with human immunodeficiency virus HIV coinfection or other underlying immunosuppressive conditions such as diabetes and increasing incidence of drug resistant multidrug resistant MDR resistant at least to rifampicin and isoniazid and extensively drug resistant XDR additionally resistant to a fluoroquinolone plus kanamycin amikacin capreomycin strains of M tuberculosis While treatment of drug susceptible TB is effective in 95 percent of disease cases supervised therapy for 6 months is challenging Inadequate inappropriate therapy due to inability of poor patients to pay for drugs and non adherence to treatment regimen and duration often results in much lower cure rates and evolution of drug resistant strains of M tuberculosis due to mutations occurring at a predictable rate in genes encoding drug targets Sequential accumulation of mutations results in evolution of MDR and XDR strains of M tuberculosis Today drug resistant TB and MDR TB have become prevalent in many parts of the world and XDR TB strains are emerging rapidly While MDR TB is difficult to treat XDR TB is untreatable in most developing countries
