Fist,2012-12-06 This is not a dictionary and nor is it an encyclopedia It is a reference and compendium of useful information about the converging worlds of computers communications telecommunications and broadcasting You

could refer to it as a guide for the Information Super Highway but this would be pretentious It aims to cover most of the more important terms and concepts in the developing discipline of Informatics which in my definition includes the major converging technologies and the associated social and cultural issues Unlike a dictionary this handbook makes no attempt to be prescriptive in its definitions Many of the words we use today in computing and communications only vaguely reflect their originations And with such rapid change older terms are often taken twisted inverted and mangled to the point where any attempt by me to lay down laws of meaning would be meaningless The information here is descriptive I am concerned with usage only This book therefore contains keywords and explanations which have been culled from the current literature from technical magazines newspapers the Internet forums etc This is the living language as it is being used today not a historical artifact of 1950s computer science   Multimedia and Communications Technology Steve Heath,1999-07-13 Multimedia and Communications Technology is a practical explanation of the technologies that bring together existing products such as the PC telephone and television It is precisely this revolution that the book addresses offering an up to date technical overview of developments in PC technology video and audio compression telecommunications and many other disciplines Written as a series of tutorials the book starts with the fundamental techniques of digital audio and video moving on to compression techniques such as JPEG and MPEG The delivery systems for multimedia are then covered starting with the CD and on to telephones local and wide area networks and ATM and ASDL The final chapters describe how these technologies are brought together in some key applications video conferencing digital video broadcasting video on demand interactive television Steve Heath is responsible for European Strategy and Technology Development at Motorola He has had many years experience in computer design and has presented papers on multimedia technology at international conferences He is a well known technical writer and has written fourteen other books for Focal Press Newnes and Butterworth Heinemann   Mobile Multimedia Communications: Concepts, Applications, and Challenges Karmakar, Gour,Dooley, Laurence S.,2007-11-30 With rapid growth of the Internet the applications of multimedia are burgeoning in every aspect of human life including communication networks and wireless and mobile communications Mobile Multimedia Communications Concepts Applications and Challenges captures defining research on all aspects and implications of the accelerated progress of mobile multimedia technologies Covered topics include fundamental network infrastructures modern communication features such as wireless and mobile multimedia protocols personal communication systems mobility and resource management and security and privacy issues A complete reference to topics driving current and potential future development of mobile technologies this essential addition to library collections will meet the needs of researchers in a variety of related fields

Wysocki,Bahram Honary,Beata J. Wysocki,2005-12-28 The unprecedented growth in the range of multimedia services offered

these days by modern telecommunication systems has been made possible only because of the advancements in signal processing technologies and algorithms In the area of telecommunications application of signal processing allows for new generations of systems to achieve performance close to theoretical limits while in the area of multimedia signal processing the underlying technology making possible realization of such applications that not so long ago were considered just a science fiction or were not even dreamed about We all learnt to adopt those achievements very quickly but often the research enabling their introduction takes many years and a lot of efforts This book presents a group of invited contributions some of which have been based on the papers presented at the International Symposium on DSP for Communication Systems held in Coolangatta on the Gold Coast Australia in December 2003 Part 1 of the book deals with applications of signal processing to transform what we hear or see to the form that is most suitable for transmission or storage for a future retrieval The first three chapters in this part are devoted to processing of speech and other audio signals The next two chapters consider image coding and compression while the last chapter of this part describes classification of video sequences in the MPEG domain
