The Might of the Multinationals Alexandr Rubner, 1990-07-26 Drawing upon his three decades of experience as a corporate economist including 17 years as a senior economist with Business International Corporation Alex Rubner here offers an incisive study of the multinational corporation as its fortunes have waxed and waned over the years. The author traces the evolution of the modern multinational corporation and the popular academic and governmental sentiments associated with it, arguing that the transnational corporate entity is far from the all powerful supranational giant many have envisioned. In contrast Rubner shows the modern multinational is a fragile strife ridden business operation often with significantly lower profit margins than smaller local or regional firms. Written for both international business scholars and lay readers interested in business matters. The Might of the Multinationals provides a compelling look at the real and imagined power of the world's largest and most well known corporations. Following an introductory chapter which sets the stage for the discussions that follow, the author addresses the concepts of the multinational company as formulated by idealistic advocates and vehement adversaries. Rubner shows that populist perceptions of the power of multinationals are of relatively recent vintage and derive from a variety of sources including religious and trade union leaders, politicians, businessmen and academic theorists. The second section explores the actual day to day realities that govern the operation of multinationals and examines such issues as the inhospitability of host countries, the inability of large bureaucratic organizations to react quickly to changing conditions and the hypersensitivity of multinationals. Finally Rubner looks to the future evaluating the revised strategies of Western multinationals regarding overseas investments. He concludes that the power of the major transnationals is diminishing along with the legends that gave birth to that perception.

Foreign Direct Investment and the Multinational Enterprise Scott Liu, 1997-09-16 Internalization theory despite criticism of its empirical deficiency has dominated the industrial organization approach to the multinational enterprise and its foreign direct investment (FDI) decisions. Liu improves the empirical foundations of internalization theory through the elaboration of the FDI signaling framework which holds that a firm's direct foreign investment influences the perceptions of less informed market participants. The signaling concept is derived from the premise that a firm's intangible assets in know-how cannot be correctly priced in a market with asymmetric information and this motivates the firm's decision to undertake FDI. If the premise is correct the firm's decision is based on inside information and

the firm's action reveals that information to the market. The firm's FDI internalization is evidence of management's confidence in its intangible assets and its action may further influence market perceptions. The hypotheses generated along this line of analysis are subjected to investigation and the evidence supports the FDI signaling proposition. Moreover, the study represents an indirect test of internalization theory. As a result, internalization is transformed from a untested theory to an empirical result.

Strategies in Global Industries Allen Morrison, 1990-06-12. This insightful monograph explodes some of the myths introduced by well-known business consultants and by strategic planning academics and replaces myth with a comprehensive model of business strategies that is applicable to the contemporary marketplace where international trade and competitiveness are issues of critical concern. Today's American businesses are challenged both at home and abroad in market battles that frequently threaten the survival of entire domestic industries. In *Strategies in Global Industries*, Morrison develops a comprehensive model of business strategies that is a prescription for increasing the competitiveness of U.S. companies. He argues that many U.S. firms misperceive global industry opportunities and as a consequence pursue strategies that may suboptimize performance. Indeed, Morrison found little evidence that U.S. businesses are actually competitive on a global scale. Results of his study of 115 global U.S. companies that have annual average sales of over 900 million form the basis for his groundbreaking conclusions that will have wide applicability to global concerns. The study's conceptual foundation consists of an integration of the contingency perspective of strategic management and the industry organization perspective of the business's context. These two perspectives are vital to an in-depth understanding of the relationship between business strategy and performance in global industries. Four appendixes detail the survey instrument and SIC Code related data. Twenty-six figures graphically display information relating to strategy classification, research methodology, global industries, key business unit characteristics, strategy types and dimensions in global industries, and more. An important contribution to the vital study of U.S. competitiveness on a global scale, the volume offers many fact-based new insights into ways to foster and improve the competitiveness of U.S. companies.
