Math Homework:

Winning the Math Homework Challenge Catheryne Draper, 2016-12-21 If you've ever been stumped by your child's math homework this is the book for you. Winning the Math Homework Challenge shares students' reasoning, thinking, and even misunderstandings about mathematics to provide you with the opportunity to see math through their eyes, including both the clarity and the confusion. Armed with this new sight and therefore insight, parents will be able to effectively communicate with their child about math experiences. This book focuses more on the why behind math relationships explained in plain English and through images that show mathematical relationships. The ability to recognize connections among math topics significantly reduces the confusion and frustration that can accompany math homework. By including more images and fewer formulas, readers, especially the visual spatial learners, are better equipped to understand how math concepts connect to each other. Finding and understanding these connections will allow parents to find their own math mojo and to pass on that legacy to their child.

The Homework Club's - Preparing for Algebra Susan

Everingham, 2017-05-19 The Problem: Preparing for Algebra meets the needs of students who experience math-related anxiety. Often weak basic elementary skills show up as learning issues by the time they enter middle school; many also suffer from habitual mistakes. Anxiety can stop kids from developing knowledge of the basics that they will need to understand algebra. An overwhelmed mind isn't open enough to learn new skills. Solving the Problem: Preparing for Algebra is designed as a supplementary workbook. We start by looking at simple things differently. The first chapter may appear too simple but it is written to bridge the language barrier between rote elementary computations to the more abstract algebra they will encounter in middle school. The pages of this book present one clear content area at a time and fewer problems than standard textbooks. Our aim is to reduce student anxiety by minimizing the number of problems per page, using larger fonts, giving more room for computation and using clear examples. The Favorite Mistakes section in the back addresses and corrects the most common habitual mistakes. The Result: This book should take your child from "I hate math" to "It's ok, I got it." Using Preparing for Algebra will rebuild the basics so that algebra and its new language will become easy to understand for your child. You'll find that about 80% of your student's math challenges are covered in this book. As a parent, you may have struggled to help your child with his or her math homework; you'll be pleasantly surprised at how easy it is to help your child using this book. Who Wrote this Book: As an after-school program, The Homework Club employed 100's of educators and taught 1000's of students. These worksheets were developed over 18 years for students to go from their basic elementary math education to succeed in middle school math and specifically with algebra. Preparing for Algebra is a must to help your child succeed with middle school algebra.

Algorithms Unplugged Berthold Vöcking, Helmut Alt, Martin

Dietzfelbinger, Rüdiger Reischuk, Christian Scheideler, Heribert Vollmer, Dorothea Wagner, 2010-12-10 Algorithms specify the way computers process information and how they execute tasks. Many recent technological innovations and achievements rely on algorithmic ideas; they facilitate new applications in science, medicine, production, logistics, traffic, communication and entertainment. Efficient algorithms not only enable your personal computer to execute the newest generation of games with features unimaginable only a few years ago; they are also key to several recent scientific breakthroughs. For example, the sequencing of the human genome would not have been possible without the invention of new algorithmic ideas that speed up

computations by several orders of magnitude The greatest improvements in the area of algorithms rely on beautiful ideas for tackling computational tasks more efficiently The problems solved are not restricted to arithmetic tasks in a narrow sense but often relate to exciting questions of nonmathematical flavor such as How can I find the exit out of a maze How can I partition a treasure map so that the treasure can only be found if all parts of the map are recombined How should I plan my trip to minimize cost Solving these challenging problems requires logical reasoning geometric and combinatorial imagination and last but not least creativity the skills needed for the design and analysis of algorithms In this book we present some of the most beautiful algorithmic ideas in 41 articles written in colloquial nontechnical language Most of the articles arose out of an initiative among German language universities to communicate the fascination of algorithms and computer science to high school students The book can be understood without any prior knowledge of algorithms and computing and it will be an enlightening and fun read for students and interested adults
