Multiprocessor Methods for Computer Graphics Rendering Scott Whitman,1992-11-02 This comprehensive work merges two of the hottest topics in computer science parallel computing and computer graphics Selected Topics from the Table of Contents Overview of Accelerated Rendering Techniques Overview of Parallel Methods for Image Generation Issues in Parallel Algorithm Development Overview of Base Level Implementation Compari *High Performance Computing for Computer Graphics and Visualisation* Min Chen,Peter Townsend,John Vince,2012-12-06 This book contains mainly a selection of papers that were presented at the International Workshop on High Performance Computing or Computer Graphics and Visualisation held in Swansea United Kingdom on 3 4 July 1995 The workshop was sponsored by the HEFCWI Initiative on Parallel Computing Foundations and Applications and it has provided the international computer graphics community with a platform for assessing and reviewing the impact of the development of high performance computing on the progress of computer graphics and visualisation presenting the current use of high performance computing architecture and software tools in computer graphics and visualisation and the development of parallel graphics algorithms identifying potential high performance computing applications in computer graphics and visualisation and encouraging members of the graphics community to think about their problems from the perspective of parallelism The book is divided into six sections The first section which acts as the introduction of the book gives an overview of the current state of the art It contains a comprehensive survey by Whitman of parallel algorithms for computer graphics and visualisation and a discussion by Hansen on the past present and future high performance computing applications in computer graphics and visualisation The second section is focused on the design and implementation of high performance architecture software tools and algorithms for surface rendering **Encyclopedia of Computer Science and Technology** Allen Kent,James G. Design Considerations for Parallel Graphics Libraries Thomas W. Crockett,Institute for Computer Applications in Science and Engineering,1994 Abstract Applications which run on parallel supercomputers are often characterized by massive datasets Converting these vast collections of numbers to visual form has proven to be a powerful aid to comprehension For a variety of reasons it may be desirable to provide this visual feedback at runtime One way to accomplish this is to exploit the available parallelism to perform graphics operations in place In order to do this we need appropriate parallel rendering algorithms and library interfaces This paper provides a tutorial introduction to some of the issues which arise in designing parallel graphics libraries and their underlying rendering algorithms The focus is on polygon rendering for distributed memory message passing systems We illustrate our discussion with examples from PGL a parallel graphics library which has been developed on the Intel family of parallel systems **Proceedings** ,2002 **Proceedings of the**
