Multivalued Linear Operators:

    Multivalued Linear Operators Ronald Cross,1998-07-09 Constructs a theoretical framework for the study of linear relations and provides underlying concepts rules formulae theorems and techniques The book compares the inversion adjoints completion and closure of various classes of linear operators It highlights compact and precompact relations

    Spectral Theory of Multivalued Linear Operators Aymen Ammar,Aref Jeribi,2021-09-14 The concept of multivalued linear operators or linear relations is the one of the most exciting and influential fields of research in modern mathematics Applications of this theory can be found in economic theory noncooperative games artificial intelligence medicine and more This new book focuses on the theory of linear relations responding to the lack of resources exclusively dealing with the spectral theory of multivalued linear operators The subject of this book is the study of linear relations over real or complex Banach spaces The main purposes are the definitions and characterization of different kinds of spectra and extending the notions of spectra that are considered for the usual one single valued operator bounded or not bounded The volume introduces the theory of pseudospectra of multivalued linear operators The main topics include demicompact linear relations essential spectra of linear relation pseudospectra and essential pseudospectra of linear relations The volume will be very useful for researchers since it represents not only a collection of a previously heterogeneous material but is also an innovation through several extensions Beginning graduate students who wish to enter the field of spectral theory of multivalued linear operators will benefit from the material covered and expert readers will also find sources of inspiration

    Spectral Theory of Block Multivalued Operator Matrices Aymen Ammar,Aref Jeribi,2025-10-21 This book presents a wide panorama of methods to investigate the spectral theory of bounded and unbounded block matrices of linear relations It explains some conditions to prove some Frobenius Schur decompositions for linear relations and characterizes the stability of the essential spectra of these linear relations It focuses on the study of the Fredholm theory in both Banach and Hilbert spaces the local spectral theory of multivalued linear operators and the block matrix of linear relations As a pioneering literature discussing spectral theory of bounded and unbounded block matrices of linear relations this book attempts to contribute to the scarce literature on the topic It gathers the minimum needed background material which allows a relatively friendly access to the book Detailed proofs of all theorems are exhibited with accuracy and clarity allowing students to thoroughly familiarize themselves with all the basic concepts   **Degenerate Differential Equations in Banach Spaces** Angelo Favini,Atsushi Yagi,1998-09-10 This work presents a detailed study of linear abstract degenerate differential equations using both the semigroups generated by multivalued linear operators and extensions of the operational method from Da Prato and Grisvard The authors describe the recent and original results on PDEs and algebraic differential equations and establishes the analyzability of the semigroup generated by some degenerate parabolic operators in spaces of continuous functions   *Operator Theory* Aref Jeribi,2021-03-22 This proceedings volume collects select contributions presented at the

International Conference in Operator Theory held at Hammamet Tunisia on April 30 May 3 2018 Edited and refereed by well known experts in the field this wide ranging collection of survey and research articles presents the state of the art in the field of operator theory covering topics such as operator and spectral theory fixed point theory functional analysis etc *Abstract Cauchy Problems* Irina V. Cross,1997 Abstract Parabolic Evolution Equations and their Applications Atsushi Yagi,2009-11-03 This monograph is intended to present the fundamentals of the theory of abstract parabolic evolution equations and to show how to apply to various nonlinear dif sion equations and systems arising in science The theory gives us a uni ed and s tematic treatment for concrete nonlinear diffusion models Three main approaches are known to the abstract parabolic evolution equations namely the semigroup methods the variational methods and the methods of using operational equations In order to keep the volume of the monograph in reasonable length we will focus on the semigroup methods For other two approaches see the related references in Bibliography The semigroup methods which go back to the invention of the analytic se groups in the middle of the last century are characterized by precise formulas representing the solutions of the Cauchy problem for evolution equations The tA analytic semigroup e generated by a linear operator A provides directly a fundamental solution to the Cauchy problem for an autonomous linear e dU lution equation AU F t 0 **Linear Operators** Nelson Dunford,Jacob T.
