Turnovsky, 1977-08-04 The main focus of this book first published in 1977 is the construction and analysis of an integrated macroeconomic model In this exercise four main aspects are stressed that has not previously received adequate textbook attention The intrinsic dynamics of the macroeconomic system are emphasized as well as developments in inflation theory particularly pertaining to the role of inflationary expectations In addition several chapters are devoted to the international aspects of macroeconomics and their thorough coverage makes this book especially relevant to countries that are heavily dependant on international trade Several aspects of stabilization policy are also discussed in detail and an introduction to optimal stabilization theory is also provided The book is appropriate to advanced undergraduate and postgraduate courses in macroeconomics      **The Essentials of Macroeconomic Analysis** Richard A. Bilas, Frank J. Alessio, 1974      *Macroeconomic Analysis and Economic Policy Based on Parametric Control* Abdykappar A. Ashimov, Bahyt T. Sultanov, Zheksenbek M. Adilov, Yuriy V. Borovskiy, Dmitriy A. Novikov, Robert M. Nizhegorodtsev, Askar A. Ashimov, 2011-11-25 After the transition to free economy governments of the former Soviet republics realized that in spite of becoming a part of the shaky international economic order their individual economic success can be assured by rational national economic policies that in addition to the fundamental law of supply and demand govern the economic mechanism sensitive to both external and internal phenomena Originally published in Russian and now translated in English this book by Dr A Ashimov and his colleagues offers a novel theory providing a numerically justifiable approach to the solution of major economy control problems that are faced by virtually every government in the world First they developed and validated numerous mathematical models describing complex interactions between economic and social factors thus enabling the decision makers to foresee the outcomes of their decisions Second on the basis of these models the authors formulated the appropriate control problems that could be interpreted as achieving the transition to the desirable economic regimes and maintaining these regimes in spite of initial conditions and both external and internal perturbations It should be noted that due to the inherent uncertainty introduced by the use of statistical models the nonlinearity of the underlying phenomena and the intention to obtain the optimal solutions the solution process becomes quite intricate and calls for the application of the most sophisticated techniques offered in advanced control theory The authors utilized the most instrumental statistical model validation techniques they established sufficient conditions for the existence of optimal solutions of the relevant control problems and they skillfully combined the applications of the phase space formalism system stability analysis and the methods of functional analysis Finally they developed algorithms resulting in the optimal problem solutions thus offering economic policy makers a dependable decision support tool *Macroeconomic Analysis and Economic Policy Based on Parametric Control* offers a novel highly mathematical approach to the solution of very realistic economy control problems It presents a good example of the application of mathematical modeling advanced control theory and model based decision making that could be adopted by researchers and graduate students specializing in

economics control and relevant areas of research addressing their own research problems      *Economic and Financial Crises*  
A. Cencini, S. Rossi, 2015-06-02 This book deals with the structural origins of economic and financial crises It explains that  
both economic theories and policies need to be grounded on a monetary macroeconomic analysis of the working of domestic  
and international economies The volume outlines reform proposals to make sure that banking activities respect the nature of  
money      *Macroeconomic Analysis* Thomas Frederick Dernburg, 1969
