Spacecraft have visited all the planets known to ancient people Human beings have visited the Moon and robot spacecraft have landed on Venus and Mars This book presents the result of this captivating voyage of discovery recording more than two decades of extraordinary accomplishments The voyage starts with the still silent and lifeless Moon Then on to the contrasting world of Mars with its towering volcanoes and deep canyons The exploration continues across asteroid belts and icy comets to the outer planets where Voyager II revealed cyclonic storms liquid hydrogen and helium rain and the beautiful pink and blue dynamic world of Neptune This book includes numerous photos from spacecraft as well as a few works of modern art They provide the best available metaphors and images of the previously invisible worlds **New Views on an Old Planet** Tjeerd Hendrik Van Andel,LeBow,2014-05-14 This 1994 book provides a historical account of the global change *Building Planet Earth* Peter John Cattermole,2000-02-24 Building Plant Earth presents a description of Earth as a planet commencing with its physical and chemical evolution out of the primordial solar nebula The condensation of elements and their redistribution are described leading into a section dealing with mapping geophysical and geochemical studies This establishes the gross structure of the Earth following which basic principles and processes of plate tectonics are then described leading to the elucidation of the working of geological cycles The main thrust of the remainder of the book is a description of the geological evolution of the Earth Volcanism and seismicity ice ages and climate isotopic techniques and age dating are all treated The

Burger,2011-04-29 A masterful survey Times Literary Supplement A concise extremely well written journey about this planet s history Highly recommended ChoiceIn a feat that may rival time travel Burger has condensed 4 5 billion years into 294 eminently readable pages as he builds a case for solitude in our Milky Way galaxy Burger writes with the clarity and humor of one who has had experience communicating complicated ideas to the lay public Boston GlobeFor many years the federal government funded the Search for Extraterrestrial Intelligence SETI later popularized by Carl Sagan s novel Contact and the movie starring Jodie Foster Though in actuality SETI never did make contact with signals from an alien civilization the search continues to this day through privately funded endeavors How likely is it that intelligent life exists elsewhere in the universe This is the intriguing question that has prompted William Burger s illuminating and absorbing exploration of the unusual circumstances surrounding life on earth Examining the critical episodes in our planet s early history and the peculiar trajectory of life on our world Burger shows that the long odyssey of planet Earth may be utterly unique in our galaxy For example he describes features of the sun that are far from average By some estimates 95 percent of the other stars in the Milky Way galaxy are smaller and it is unlikely that any of them could supply the energy requirements for a life sustaining planet such as our own Earth as the third planet from the sun sits within the Goldilocks orbit it is in the perfect position to receive not too much heat like Mercury and Venus and not too little like more distant planets of the solar system but just the right amount to foster the development of life Turning to the evolution of life itself Burger points out a host of amazing accidents for example the extinction of dinosaurs and the proliferation of flowering plants that make the steps along the way to *Homo sapiens* seem like very rare events indeed He also calls attention to the curious fact that the early hominid brain tripled in size over the relatively short time period leading to the appearance of modern human beings Finally he notes aspects of humanity s cultural evolution that seem unlikely to have been duplicated anywhere else Burger s enlightening evaluation of evolutionary and cosmic history full of fascinating details shows that the human achievement may be unique in our galaxy More Praise for *Perfect Planet Clever Species* This is by far the best existing treatment of the SETI problem Based on the most recent findings of science it analyzes in full detail all the unique factors that would have to be right for success Particularly fascinating is Burger s critical study of the ten thousands of unpredictable steps in the evolution of *Homo sapiens* after the origin of life A splendid history of mankind Ernst Mayr Harvard UniversityI believe that this brilliant richly documented and well written book on par in historical influence or importance with classics such as Rachel Carson s *Silent Spring* Paul Ehrlich s *The Population Bomb* E O Wilson s *On Human Nature* or Sarah Blaffer s *Mother Nature* will go down as one of the most significant philosophical guides for us to follow as
