Phillips, 2005-05-25 Looking forward to the future it is clear that today's narrow concept of fiber as a basic element for textiles ropes and nets will become an outmoded notion. The emphasis will instead shift to new and exciting developments in fiber technology and their applications exploring such fields as biomimetics nanotechnology and biodegradability. *New millennium fibers* describes and identifies the scope of high tech fibers. The present status and prospects of the fiber textile technology are discussed and the high performance fibers are reviewed from origin to future applications including carbon fiber. The themes of the book are summarised with a discussion on health care and the environment. As the 21st century progresses fibers will enter into more novel and unexpected applications. We are approaching the age of the wearable computer and organic electroluminescence wearable displays. New potential is open in the fields of car and aerospace industry civil engineering separation membranes using hollow fibers for artificial organs biodegradable fiber for ecological conservation and fibers with biological functions. *New millennium fibers* explores the exciting roles that fibers will play in the future and will be an essential book for all of those in the textile and fashion industry involved in fiber development or use. Keep up to date with the advances in fiber science. Explores new and exciting developments in fiber technology. Includes applications of new millennium fibers. **New Fibers** Tatsuya

Hongu, Glyn O. Phillips, 1997-01-01 The first edition of *New Fibers* was enthusiastically received by a worldwide audience and this second edition has provided an opportunity to revise and update its contents and examine new developments since 1990. There have been considerable changes in the nature of the fibers being produced the production methods and in consumers values and expectations. Since 1990 the march of high tech fibers has continued with an ever increasing sub division to meet specialised applications as in high performance high function and high sense fibers. New research and development has produced fibers with high tenacity and modulus to give the super fibers now used as industrial materials. The more aesthetic and comfortable modern lifestyle has given rise to improved Shin gosen and it is this springboard that leads on to fibers for the next millennium the subject of a new chapter. Another new chapter examines the resurgence of synthetic cellulose since 1990 in particular the various solvent spun fibers of the Lyocell and Tencell families. Identification of Textile Fibers M M

Houck, 2009-01-30 The identification of fibers is important to the textile industry forensic science fashion designers and historians among others.
