Committee on Energy and Natural Resources,2007 *Handbook of Energy Transitions* Muhammad Asif,2022-10-14 The global energy scenario is undergoing an unprecedented transition In the wake of enormous challenges such as increased population higher energy demands increasing greenhouse gas emissions depleting fossil fuel reserves volatile energy prices geopolitical concerns and energy insecurity issues the energy sector is experiencing a transition in terms of energy resources and their utilization This modern transition is historically more dynamic and multidimensional compared to the past considering the vast technological advancements socioeconomic implications and political responses and ever evolving global policies and regulations Energy insecurity in terms of its critical dimensions access affordability and reliability remains a major problem hindering the socioeconomic progress in developing countries The Handbook of Energy Transitions presents a holistic account of the 21st century energy transition away from fossil fuels It provides an overview of the unfolding transition in terms of overall dimensions drivers trends barriers policies and geopolitics and then discusses transition in terms of particular resources or technologies such as renewable energy systems solar energy hydropower hydrogen and fuel cells electric vehicles energy storage systems batteries digitalization smart grids blockchain and machine learning It also discusses the present energy transition in terms of broader policy and developmental perspectives Further it examines sustainable development the economics of energy and green growth and the role of various technologies and initiatives like renewables nuclear power and electrification in promoting energy security and energy transition worldwide Key Features Includes technical economic social and policy perspectives of energy transitions Features practical case studies and comparative assessments Examines the latest renewable energy and low carbon technologies Explains the connection between energy transition and global climate change Mainstreaming Building Energy Efficiency Codes in Developing Countries Feng Liu,Anke S. Meyer,John F. Hogan,2010-10-12 Urbanization and growing wealth in developing countries portend a large increase of demand for modern energy services in residential commercial and public service buildings in the coming decades Pursuing energy efficiency in buildings is vital to energy security in developing countries and is identified by the Intergovernment Panel on Climate Change as having the greatest potential for cost effective reduction of CO2 emissions by 2030 among all energy consuming sectors Building energy efficiency codes BEECs along with energy efficiency standards for major appliances and equipment are broadly recognized as a necessary government intervention to overcome persistent market barriers to capturing the economic potential of energy efficiency gains in the residential commercial and public service sectors Implementation of BEECs help prevent costly energy wastes over the lifecycles of buildings in space heating air conditioning lighting and other energy service requirements Nonetheless achieving the full potential of energy savings afforded by more energy efficient buildings requires holding people who live or work in buildings accountable for the cost of energy services Compliance enforcement has been the

biggest challenge to implementing BEECs This report summarizes the findings of an extensive literature survey of the experiences of implementing BEECs in developed countries as well as those from case studies of China Egypt India and Mexico It also serves as a primer on the basic features and contents of BEECs and the commonly adopted compliance and enforcement approaches This report highlights the key challenges to improving compliance enforcement in developing countries including government commitment to energy efficiency the effectiveness of government oversight of the construction sector the compliance capacity of building supply chain and financing constraints The report notes that the process of transforming a country's building supply chain toward delivering increasingly more energy efficient buildings takes time and requires persistent government intervention through uniformly enforced and regularly updated BEECs The report recommends increased international support in strengthening the enforcement infrastructure for BEECs in middle income developing countries For low and lower middle income countries there is an urgent need to assist in improving the effectiveness of government oversight system for building construction laying the foundation for the system to also cover BEECs
