## New Towns Building Cities From Scratch:

New Towns: Building Cities from Scratch Martha E. Munzer, John Vogel, 1974 Profiles the founder of the New Town movement and discusses the development of British new towns the Radburn Idea Greenbelt Towns and the American new towns such as Reston and Columbia     **The Death and Life of Main Street** Miles Orvell, 2012-10-01 For more than a century the term Main Street has conjured up nostalgic images of American small town life Representations exist all around us from fiction and film to the architecture of shopping malls and Disneyland All the while the nation has become increasingly diverse exposing tensions within this ideal In The Death and Life of Main Street Miles Orvell wrestles with the mythic allure of the small town in all its forms illustrating how Americans continue to reinscribe these images on real places in order to forge consensus about inclusion and civic identity especially in times of crisis Orvell underscores the fact that Main Street was never what it seemed it has always been much more complex than it appears as he shows in his discussions of figures like Sinclair Lewis Willa Cather Frank Capra Thornton Wilder Margaret Bourke White and Walker Evans He argues that translating the overly tidy cultural metaphor into real spaces as has been done in recent decades especially in the new urbanist planned communities of Elizabeth Plater Zyberk and Andres Duany actually diminishes the communitarian ideals at the center of this nostalgic construct Orvell investigates the way these tensions play out in a variety of cultural realms and explores the rise of literary and artistic traditions that deliberately challenge the tropes and assumptions of small town ideology and life

What Cities Say Emily Talen, 2024-07-23 In What Cities Say Emily Talen provides a wide ranging yet concise synthesis of the fundamental drivers of built form its social and cultural meaning and how we should interpret it Including thirty five distinct city patterns and forms Talen develops a language of interpretation to understand the motive and meaning behind the city and its elements By exposing these meanings Talen asserts that we will be in a stronger position to articulate and argue for the kinds of cities we want     *Explorations in Urban Design* Matthew Carmona, 2017-05-15 Whilst recognising that distinctly different traditions exist within the study and practice of urban design this book advances an interdisciplinary and innovative approach which is of direct importance to understanding the urban forms conditions practices and processes It enthuses and inspires users who are grappling with urban design research problems but who need inspiration to move from idea to methodological approach Through the work of 32 urban researchers from the arts sciences and social sciences it demonstrates a wide range of problems and approaches and shows how the diverse range of complementary approaches can come together to provide a holistic understanding to the design of cities While each of the contributors presents a particular approach to researching the field sometimes focusing centrally on particular research methodologies others cutting across methods or focusing on theory all include discussion of actual research projects to illustrate their application to real world problems This book will be valuable to everyone from the informed undergraduate student about to embark on their first dissertation to PhD students and seasoned researchers immersed in methodological

and conceptual complexity and wishing to compare available and appropriate methodological paths **Cities and Inequalities in a Global and Neoliberal World** Faranak Miraftab, David Wilson, Ken Salo, 2015-04-24 Cities continue to be key sites for the production and contestation of inequalities generated by an ongoing but troubled neoliberal project. Neoliberalism's onslaught across the globe now shapes diverse inequalities: poverty, segregation, racism, social exclusion, homelessness. As city inhabitants feel the brunt of privatization, state reorganization, and punishing social policy. This book examines the relationship between persistent neoliberalism and the production and contestation of inequalities in cities across the world. Case studies of current city realities reveal a richly place-specific and generalizable neoliberal condition that further deepens the economic, social, and political relations that give rise to diverse inequalities. Diverse cases also show how people struggle against a neoliberal ethos and hence the open-endedness of futures in these cities. **Urban Landscapes in High-Density Cities** Bianca Maria Rinaldi, Puay Yok Tan, 2019-06-04 The positive effects of urban green spaces are well known, ranging from the promotion of health to support of biodiversity to climate regulation. However, the practical implementation of urban landscapes is less discussed. How can we make these spaces functional, economically feasible, and inclusive, especially as cities become more diverse? The publication explores strategies to reconcile the various demands such as food production, resilience, and nature conservation. Indeed, urban landscapes have to be restorative, ecological, and aesthetically pleasing at the same time. This is a particular challenge in high-density cities like Singapore, Seoul, or New York, where space is a scarce commodity. The continuing growth of the worldwide urban population imbues the topic with a special urgency. **Many Urbanisms** Martin J. Murray, 2022-02-15 Winner 2023 Choice Outstanding Academic Title. Now, for the first time in history, the majority of the world's population lives in cities. But urbanization is accelerating in some places and slowing down in others. The sprawling megacities of Asia and Africa, as well as many other smaller and medium-sized cities throughout the Global South, are expected to continue growing. At the same time, older industrial cities in wealthier countries are experiencing protracted socioeconomic decline. Nonetheless, mainstream urban studies continue to treat a handful of superstar cities in Europe and North America as the exemplars of world urbanism, even though current global growth and development represent a dramatic break with past patterns. Martin J. Murray offers a groundbreaking guide to the multiplicity, heterogeneity, and complexity of contemporary global urbanism. He identifies and traces four distinct pathways that characterize cities today: tourist/entertainment cities with world-class aspirations; struggling postindustrial cities; megacities experiencing hypergrowth; and instant cities or master-planned cities built from scratch. Murray shows how these different types of cities respond to different pressures and logics, rather than progressing through the stages of a predetermined linear path. He highlights new spatial patterns of urbanization that have undermined conventional understandings of the city, exploring the emergence of polycentric, fragmented, haphazard, and unbounded metropolises. Such cities, he argues, should not be seen as deviations from a norm but rather as alternatives within a constellation of urban
