New Models For Creative Giving:

The Word and Words Made Flesh , In this spiritual autobiography the author focuses on eight segments of the life and work of Jesus their application to the ministerial vocation in the world today and the particular mission of the Presbyterian clergyman over the past seventy five years Devout in his faith and beliefs the author maintains a unique perspective I perceive my life as well as the lives of others in a rather different vein than does society in general he says I sense my life and the lives of others as God breathed life and lives coming from God And in a sense the Word and words made flesh in each event From his specialized viewpoint he reveals the role of God and ministry in his life a life that in the end will span no more than the space of two of God s breaths Creative Model Construction in Scientists and Students John Clement,2008-06-10

How do scientists use analogies and other processes to break away from old theories and generate new ones This book documents such methods through the analysis of video tapes of scientifically trained experts thinking aloud while working on unfamiliar problems Some aspects of creative scientific thinking are difficult to explain such as the power of analogies the use of physical intuition and the enigmatic ability to learn from thought experiments The book examines the hypothesis that these processes are based on imagistic mental simulation as an underlying mechanism This allows the analysis of insight Aha episodes of creative theory formation Advanced processes examined include specialized conserving transformations Gedanken experiments and adjusted levels of divergence in thinking Student interviews are used to show that students have natural abilities for many of these basic reasoning and model construction processes and that this has important implications for expanding instructional theories of conceptual change and inquiry I regard this work as the most comprehensive account ever attempted to show how imagistic analogic and sensory motor representations participate in creative thinking Professor Ryan Tweney
