

Informed Consent

- o It is both a process and paperwork
- o Informed consent begins after the doctor has gathered all necessary information and has determined the necessary intervention
- o The doctor must give the information he or she knows that may play a role in the patients decision about his or her health or health care choices

Although informed consent for clinical treatment has become a vital part of contemporary medical practice, it means different things in different contexts is variably practised and rarely achieves the theoretical ideal. In this review, we focus on the clinical practice of informed consent.

New Paradigm For Informed Consent:

A New Paradigm for Informed Consent Irene S. Switankowsky, 1998 In this book the elements of informed consent are brought into a unified theory that results in a new paradigm for informed consent. Based upon an autonomy enhancing model this paradigm makes it a necessary condition that the patient gives an autonomous and well informed decision in favor of a medical treatment. The author proceeds to redefine the physician patient relationship so that the relationship is an equal partnership between the two individuals with the common goal of improving overall health and well being. This will be a valuable book for anyone interested in bioethics as well as medical professionals. *Self-determination in Health Care* Leroy C. Edozien, 2016-03-03 It is generally accepted in legal and bioethical discourse that the patient has a right to self determination. In practice though this is often not the case. Paternalism is waning and it is increasingly recognised that there are values other than medical factors which determine the choices that patients make. Unfortunately these developments have not resulted in huge advances for patient self determination which is largely because the consent model has fundamental flaws that constrain its effectiveness. This book sets out to offer an alternative model to consent. In the property model proposed here the patient's bodily integrity is protected from unauthorised invasion and their legitimate expectation to be provided with the relevant information to make an informed decision is taken to be a proprietary right. It is argued that the property model potentially overcomes the limitations of the consent model including the obstacle caused by the requirement to prove causation in consent cases. The author proposes that this model could in the future provide an alternative or complementary approach for the courts to consider when dealing with cases relating to self determination in health care.
