In this paper, nonlocal symmetries are considered for some integrable equations including the first equation of the AKNS hierarchy, the so-called breaking soliton equation, the Boussinesq equation and the Toda equation. Besides, using invariant transformations of corresponding spectral problems, more nonlocal symmetries can be produced from one seed symmetry.

1 Introduction

Symmetries and conservation laws for differential equations are the central themes of perpetual interest in mathematical physics. During past thirty years, the study of symmetries has been connected with the development of soliton theory and, in fact, it constitutes an indispensable and important part of soliton theory.

Let us begin with the celebrated Korteweg de Vries equation

$$u_t + 6uu_x + u_{xxx} = 0, \quad (1)$$

where the subscripts represent derivatives. A symmetry of the KdV equation (1) is defined as a solution of its linearized equation

$$\sigma_t + 6(u\sigma)_x + \sigma_{xxx} = 0. \quad (2)$$

It is well known that x -translation and t -translation invariance of (1) leads to the following symmetries: u_x , u_t of the KdV equation (1). In order to find more generalized symmetries, the concepts of recursion operators or strong symmetries, and hereditary symmetries were introduced by Olver and Fuchssteiner and used to find these symmetries [1, 2]. Furthermore, Galilean invariance of the KdV equation (1) leads to symmetry $u_x - \frac{1}{6}$, which may be viewed as the origin of active research on the time-dependent symmetries and the corresponding Lie algebraic structures for nonlinear equations; and these time-dependent symmetries are connected with nonisospectral problems (see, e.g. [3–6]). Apart from the symmetries mentioned above, there exist so-called nonlocal symmetries expressed by spectral functions, e.g., $\sigma = (\phi^2)_x$ is a symmetry of the KdV equation (1), where ϕ is a spectral function of Lax pair

$$\phi_{xx} + u\phi = \lambda\phi, \quad (3)$$

$$\phi_t = u_x\phi - (2u + 4\lambda)\phi_x. \quad (4)$$

To search for nonlocal symmetries is an interesting topic. On one hand, these nonlocal symmetries enlarge class of symmetries. Besides, nonlocal symmetries are connected with integrable models. Such an example is the nonlocal symmetry $\sigma = (\phi^2)_x$ generates well-known sinh-Gordon
