## Psychodynamic Aspects of Intergroup Relations

GARY GEMMILL

MICHAEL ELMES

*Using a psychodynamic perspective on intergroup relations, it is suggested that in-groups create enemy out-groups to avoid dealing with internally generated, emotionally laden issues—the group shadow—that exist within the in-group. In-groups develop an exaggerated view of themselves—the social mask—to sustain an illusion of harmony, homogeneity, and cohesiveness by which they can avert the group shadow. Using a specific consulting-client example, intergroup mirroring is discussed as a method by which in-groups can acknowledge ownership of their social masks and projected shadows. It is proposed that bringing both the group shadow and masking into consciousness fosters reparation within and between groups.*

"My enemy said to me, "Love your enemy" and I obeyed him and loved myself."

K. Gibran, *Spiritual Sayings of Kahlil Gibran*

Like the woman in the cartoon (see Figure 1), we often interpret events as if only "bad people"—those largely nameless and faceless "others" who we characterize in stereotypically negative ways—commit acts of brutality, ruthlessness, cowardice, deception, and so on. It comes as a shock when "good people"—people like ourselves who we deem to be responsible, reasonable, conscientious—act in those same stereotypically negative ways. After all, "badness" is supposed to be confined to our enemies, and "goodness" is supposed to be inherent in ourselves and in the social groups with which we identify. Indeed, responding to the threat of an outside enemy is a familiar rationale for activities such as massive defense buildups, exaggerated budget requests, defensive posturing, and so on. That neither we nor our enemies are all good nor all bad but a mixture of both, suggests that our enemies do not, as many would believe, really create us but, rather, that we create our enemies.

Although the exploration of intergroup relationships could be potentially framed in many ways, for many years the central focus of both theorists and researchers has been on the analysis of perceptions, attitudes, and environmental attributes that exacerbate or diminish the intensity of intergroup conflicts (Alderfer, 1977; Coser, 1956; Levine & Campbell, 1972; Smith & Berg, 1987; Volkau, 1988). These factors have been largely conceptualized in terms of *objective* dimensions (conscious, mindful behavior that reflects rational intention and involves directly observable behavior) and *subjective* dimensions (unconscious emotional determinants that reflect nonrational behavior and the psychodynamics of defense mechanisms).

From a somewhat different perspective, Coser (1956) in his classic, *Social Functions of Conflict*, conceptualized conflict into "realistic" and "non-realistic" dimensions. Although this terminology still exists in the literature, it is our opinion that it is a misnomer due largely to the surplus meaning of the term *realistic*. *Realistic* denotes what actually occurs in reality; *non-realistic* conflict very much occurs in reality. Emotions, as well as thoughts, exist in reality. For this reason, we have chosen to refer to objective and subjective dimensions of conflict between
