Modeling Multigroup Populations

Dudley L. Poston Jr.

Modeling Multigroup Populations:

Modeling Multigroup Populations Robert Schoen, 1987-10-31 This book deals with models that can capture the behavior of individuals and groups over time. Organizationally it is divided into three parts. Part I discusses the basic decrement only life table and its associated stable population. Part II examines multistate or increment-decrement models and provides the first comprehensive treatment of those extremely flexible and useful life table models. Part III looks at two sex models which simultaneously incorporate the marriage or fertility behavior of males and females. Those models are explored more fully and completely here than has been the case to date and the importance of including the experience of both sexes is demonstrated analytically as well as empirically. In sum this book considers a broad range of population models with a view to showing that such models can be eminently calculable, clearly interpretable and analytically valuable for the study of many kinds of social behavior. Four appendixes have been added to make the book more usable. Appendix A provides a brief introduction to calculus and matrix algebra so that readers can understand though not necessarily derive the equations presented. Appendix B provides an index of the principal symbols used. Appendix C gives the answers to the exercises found at the end of each chapter. Those exercises should be seen as an extension of the text and are intended to inform as well as to challenge.

Dynamic Population Models Robert Schoen, 2007-05-05 Dynamic Population Models is the first book to comprehensively discuss and synthesize the emerging field of dynamic modeling. Incorporating the latest research it includes thorough discussions of population growth and momentum under gradual fertility declines, the impact of changes in the timing of events on fertility measures and the complex relationship between period and cohort measures. The book is designed to be accessible to those with only a minimal knowledge of calculus.

Structural Equation Modeling Jichuan Wang, Xiaoqian Wang, 2019-09-17 Presents a useful guide for applications of SEM whilst systematically demonstrating various SEM models using Mplus. Focusing on the conceptual and practical aspects of Structural Equation Modeling SEM this book demonstrates basic concepts and examples of various SEM models along with updates on many advanced methods including confirmatory factor analysis (CFA) with categorical items, bifactor model, Bayesian CFA model, item response theory (IRT) model, graded response model (GRM), multiple imputation (MI) of missing values, plausible values of latent variables, moderated mediation model, Bayesian SEM, latent growth modeling (LGM) with individually varying times of observations, dynamic structural equation modeling (DSEM), residual dynamic structural equation modeling (RDSEM), testing measurement invariance of instrument with categorical variables, longitudinal latent class analysis (LLCA), latent transition analysis (LTA), growth mixture modeling (GMM) with covariates and distal outcome, manual implementation of the BCH method and the three step method for mixture modeling, Monte Carlo simulation, power analysis for various SEM models and estimate sample size for latent class analysis (LCA) model. The statistical modeling program Mplus Version 8.2 is featured with all models updated. It provides researchers with a flexible tool that allows them to analyze data with an easy to use interface and graphical displays of data.

and analysis results Intended as both a teaching resource and a reference guide and written in non mathematical terms Structural Equation Modeling Applications Using Mplus 2nd edition provides step by step instructions of model specification estimation evaluation and modification Chapters cover Confirmatory Factor Analysis CFA Structural Equation Models SEM SEM for Longitudinal Data Multi Group Models Mixture Models and Power Analysis and Sample Size Estimate for SEM Presents a useful reference guide for applications of SEM while systematically demonstrating various advanced SEM models Discusses and demonstrates various SEM models using both cross sectional and longitudinal data with both continuous and categorical outcomes Provides step by step instructions of model specification and estimation as well as detailed interpretation of Mplus results using real data sets Introduces different methods for sample size estimate and statistical power analysis for SEM Structural Equation Modeling is an excellent book for researchers and graduate students of SEM who want to understand the theory and learn how to build their own SEM models using Mplus

MATHEMATICAL MODELS - Volume III Jerzy A. Filar, Jacek B Krawczyk, 2009-09-19 Mathematical Models is a component of Encyclopedia of Mathematical Sciences in the global Encyclopedia of Life Support Systems EOLSS which is an integrated compendium of twenty one Encyclopedias The Theme on Mathematical Models discusses matters of great relevance to our world such as Basic Principles of Mathematical Modeling Mathematical Models in Water Sciences Mathematical Models in Energy Sciences Mathematical Models of Climate and Global Change Infiltration and Ponding Mathematical Models of Biology Mathematical Models in Medicine and Public Health Mathematical Models of Society and Development These three volumes are aimed at the following five major target audiences University and College students Educators Professional practitioners Research personnel and Policy analysts managers and decision makers and NGOs

Handbook of Population Dudley L. Poston Jr., 2019-04-16 The 2nd edition of the Handbook of Population covers the major topics of the discipline of demography including current substantive methodological and theoretical issues of interest as well as new and emerging topics in the field In addition to revised updated and extended chapters that were included in the 1st edition this 2nd edition of the Handbook brings to the forefront entirely new chapters covering such major themes as children adoption sexuality inequality population psychology rural demography and obesity Chapters in this Handbook will expand our knowledge of the field and will raise awareness of the causes and the consequences of demographic behavior and events in societies throughout the world This 2nd edition will also serve as a reference in the field of population studies for years to come It will generate new questions and research ideas and will positively impact the growth development and expansion of demography

Recent Advancements in Structural Equation Modeling (SEM): From Both Methodological and Application Perspectives

Oi-Man Kwok, Mike W.-L. Cheung, Suzanne Jak, Ehri Ryu, Jerry Jiun-Yu Wu, 2019-02-08 Structural equation modeling SEM is becoming the central and one of the most popular analytical tools in the social sciences Many classical and modern statistical techniques such as regression analysis path analysis confirmatory factor analysis and models with both measurement and

structural components have been shown to fall under the umbrella of SEM Thus the flexibility of SEM makes it applicable to many research designs including experimental and non experimental data cross sectional and longitudinal data and multiple group and multilevel data In this eBook you will find 19 cutting edge papers from the Research Topic Recent Advancements in Structural Equation Modeling SEM These 19 papers cover a wide variety of topics related to SEM including a analysis of different types of data from cross sectional data with floor effects to complex survey data and longitudinal data b measurement related issues from the development of new scale to the evaluation of person fit and new ways to test measurement invariance and c technical advancement and software development We hope that the readers will gain new perspectives and be able to apply some of the new techniques and models discussed in these 19 papers
