---

The background of the slide features a complex, abstract pattern of overlapping squares and rectangles in various shades of green, blue, and red. A large, dark blue arrow points from the top left towards the center. Another large, red arrow points from the center towards the bottom left. The overall effect is a dynamic, geometric design that suggests a manufacturing or systems analysis theme.

**Manufacturing Systems Modeling and Analysis** Guy L. Curry, Richard M. Feldman, 2010-11-10 This text presents the practical application of queueing theory results for the design and analysis of manufacturing and production systems This textbook makes accessible to undergraduates and beginning graduates many of the seemingly esoteric results of queueing theory In an effort to apply queueing theory to practical problems there has been considerable research over the previous few decades in developing reasonable approximations of queueing results This text takes full advantage of these results and indicates how to apply queueing approximations for the analysis of manufacturing systems Support is provided through the web site <http://msma.tamu.edu> Students will have access to the answers of odd numbered problems and instructors will be provided with a full solutions manual Excel files when needed for homework and computer programs using Mathematica that can be used to solve homework and develop additional problems or term projects In this second edition a separate appendix dealing with some of the basic event driven simulation concepts has been added

**Stochastic Modeling and Analysis of Manufacturing Systems** David D. Yao, 2012-12-06 Manufacturing systems have become increasingly complex over recent years This volume presents a collection of chapters which reflect the recent developments of probabilistic models and methodologies that have either been motivated by manufacturing systems research or been demonstrated to have significant potential in such research The editor has invited a number of leading experts to present detailed expositions of specific topics These include Jackson networks fluid models diffusion and strong approximations the GSMP framework stochastic convexity and majorization perturbation analysis scheduling via Brownian models and re entrant lines and dynamic scheduling Each chapter has been written with graduate students in mind and several have been used in graduate courses that teach the modeling and analysis of manufacturing systems
