Modelling Complex Projects:

Managing and Modelling Complex Projects T.M. Williams, 2013-12-20 Projects are becoming more complex and traditional project management is proving inadequate. The key papers in this volume which takes a look at a variety of new approaches have been written by 13 leading figures and are discussed by 54 invited academics consultants contractors and clients from 15 countries. The papers cover modelling techniques extensions to PERT methods risk analysis and system dynamics particular domains new technology software development and infrastructure projects specifically human factors corporate structures from both Western and Eastern European perspectives management techniques Western and Eastern and the management of portfolios of projects. The book adopts a wide view rather than advocating one technique the mix of authors provides a rich heterogeneous perspective. Mathematical modelling is balanced with human management and over complex of simplistic techniques are avoided. Readers are assumed already to have a sound knowledge of project management.

Modelling Complex Projects Terry Williams, 2002-10-11 IN RECENT YEARS the need for help in understanding project behaviour has been exacerbated as projects have become more complex while time scales have tightened adding to project complexity. Project teams however rarely pay sufficient attention to modelling the behaviour of projects and this can lead to inadequate risk analysis ineffective project control and uninformed lessons learned. Because the behaviour of complex projects is often puzzling or counter intuitive we need models. This book presents a structured toolkit of techniques developed gradually from the simple to the more complex and provides examples to show where when and why the techniques should be used. It looks at what causes project complexity describes various aspects of project behaviour and develops modelling tools. Starting with more traditional techniques modelling individual effects on projects giving a full treatment including some novel network concepts the book enables readers to build breakdown and network type models. It also considers some of the more difficult aspects of modelling by moving into the softer more subjective effects and then looking at systemic models of the effects as they come together. Finally it looks at various methods of developing hybrid tools to utilise the benefits of combinations of techniques. Based on a wealth of practical experience and bringing together a range of tried and tested techniques this book explains where the use of modelling can help estimate monitor control and analyse projects and thus lead to successful implementation.
