**Hybrid Solutions for the Modelling of Complex Environmental Systems** Christian E. Vincenot, Stefano Mazzoleni, Lael Parrott, 2017-01-11 Systems studied in environmental science due to their structure and the heterogeneity of the entities composing them often exhibit complex dynamics that can only be captured by hybrid modeling approaches While several concurrent definitions of hybrid modeling can be found in the literature it is defined here broadly as the approach consisting in coupling existing modelling paradigms to achieve a more accurate or efficient representation of systems The need for hybrid models generally arises from the necessity to overcome the limitation of a single modeling

technique in terms of structural flexibility capabilities or computational efficiency This book brings together experts in the field of hybrid modelling to demonstrate how this approach can address the challenge of representing the complexity of natural systems Chapters cover applied examples as well as modeling methodology *Ibss: Economics: 1999* Compiled by the British Library of Political and Economic Science, 2000-12-07 IBSS is the essential tool for librarians university departments research institutions and any public or private institution whose work requires access to up to date and comprehensive knowledge of the social sciences Mathematical Modeling in Economics, Ecology and the Environment Natali Hritonenko, Yuri Yatsenko, 2014-01-08 Updated to textbook form by popular demand this second edition discusses diverse mathematical models used in economics ecology and the environmental sciences with emphasis on control and optimization It is intended for graduate and upper undergraduate course use however applied mathematicians industry practitioners and a vast number of interdisciplinary academics will find the presentation highly useful Core topics of this text are Economic growth and technological development Population dynamics and human impact on the environment Resource extraction and scarcity Air and water contamination Rational management of the economy and environment Climate change and global dynamics The step by step approach taken is problem based and easy to follow The authors aptly demonstrate that the same models may be used to describe different economic and environmental processes and that similar investigation techniques are applicable to analyze various models Instructors will appreciate the substantial flexibility that this text allows while designing their own syllabus Chapters are essentially self contained and may be covered in full in part and in any order Appropriate one and two semester courses include but are not limited to Applied Mathematical Modeling Mathematical Methods in Economics and Environment Models of Biological Systems Applied Optimization Models and Environmental Models Prerequisites for the courses are Calculus and preferably Differential Equations *Integrated Assessment of Water Resources and Global Change* Eric Craswell, Mike Bonnell, Deborah Bossio, Siegfried Demuth, Nick van de Giesen, 2007-04-05 This book presents papers from an international conference held in Bonn Germany in February 2005 that dealt with integrated water resources management in industrialized and developing countries The papers detail such emerging concepts as blue and green water virtual water the water footprints of nations multi agent modeling linkages between water and biodiversity and social learning and adaptive management Carbon Mitigation System Engineering Yi-Ming Wei, 2025-11-08 This book provides a comprehensive introduction to the theoretical technological and practical systems of carbon mitigation system engineering developed by the author s team through long term research and engineering practice The book is structured into three sections Theory Technology and Practice Section I establishes the carbon mitigation system engineering theory referred to as the Time Space Efficiency Benefit TSEB coordination theory Guided by this theory section II establishes a comprehensive assessment technology system for carbon mitigation pathway design officially named the China s Climate Change Integrated Assessment Model C IAM Section III addresses key engineering challenges in Carbon

Capture Utilization and Storage CCUS projects by employing the TSEB theory and C IAM model These challenges encompass project feasibility assessment site selection infrastructure planning schedule management operational optimization and risk management This book is tailored for professionals in carbon neutrality and emission reduction fields including engineers government officials corporate managers university students researchers and other stakeholders interested in climate change and energy system low carbon transitions as well as carbon reduction The translation was done with the help of artificial intelligence A subsequent human revision was done primarily in terms of content

**Navigating the Complexity Across the Peace-Sustainability-Climate Security Nexus** Bernard Amadei,2023-11-28 Promoting peace and sustainability in human development while accounting for the risks associated with the impact of climate change on society has become more imperative than ever when addressing humanity s challenges of the twenty first century There is enough evidence that peace sustainability and climate security are entangled with multiple complex interactions and cannot be dealt with in isolation and independently from the environment and the numerous systems with which they interact Yet the intersection of peace sustainability and climate security or their opposites i e conflict unsustainability and climate vulnerability is rarely articulated with a systemic mindset A multi solving nexus approach is more appropriate to capture the complexity and uncertainty of how the three sectors of peace sustainability and climate security play a role in community development the nature of their causal chains and the feedback on how community development affects the three sectors Navigating the Complexity Across the Peace Sustainability Climate Security Nexus explores the value proposition of using a systems approach methodology and tools to comprehend and model that dynamic Features of the book Explores the interaction between the different components of peace and the relationship between peace sustainability and climate security using semi qualitative and quantitative tools Explains how climate adaptation and mitigation are related to peace or conflict Presents generic system dynamics modeling that can be used in different contexts

**A Systems Approach to Modeling the Water-Energy-Land-Food Nexus, Volume II** Bernard Amadei,2019-02-13 This two volume book describes a flexible and adaptive system based methodology and associated guidelines for the management and allocation of community based WELF resources Over the next 50 years rapid population urbanization and economic growth worldwide will create unprecedented demands for water energy land and food WELF resources The discussion on how to meet human needs for WELF resources and how to guarantee their respective securities has changed over time from looking at all four sectors in isolation to understanding their interdependency through the so called WELF nexus The approach presented in this book responds to the overall agreement in the WELF nexus literature that the management and allocation of WELF resources at the community level need to be examined in a more systemic multidisciplinary participatory and practical manner while seeking to increase synergies and reduce trade offs This book was written to explore the value proposition of that approach This two volume book describes a flexible and adaptive system based methodology and associated guidelines for the

management and allocation of community based WELF resources Volume 1 focuses on defining the landscape in which the nexus operates and outlines the proposed methodology Volume 2 explores the quantitative and qualitative modeling of the nexus and landscape using system modeling tools including system dynamics It presents a road map for the formulation simulation selection and ranking of possible intervention plans The proposed methodology is designed to serve as a guide for different groups involved in the science and policy decision aspects of the WELF nexus within the context of community development The methodology focuses mostly on WELF related issues in small scale and low income communities where securing resources is critical to their short and long term livelihood and development

**Integrated Modelling of Ecosystem Services and Land-Use Change** Youjia Liang,Lijun Liu,Jiejun Huang,2019-10-17 This book presents essential case studies on the integrated modelling of ecosystem services and land use change in the field of landscape ecology The case studies were mainly conducted in the Zhangye oasis of the Hexi corridor and the upper reaches of the Heihe river basin including Loess plateau for wind power and the inland waterways of the Yangtze River for the regulation of extreme events The book puts forward an integrated modelling method including human activities natural processes land use change and ecosystem management and explores multiple scenarios based on the interests of local managers and their implications for ecosystem services As the book demonstrates the integrated modelling method for ecosystem services and land use change can serve as a valuable tool for gauging the impact of various development scenarios in this study area and in other regions with similar characteristics In addition numerous charts and diagrams are included in each chapter facilitating the simulation and assessment of specific land use change impacts on ecosystem services in various study areas *The Forestry Chronicle*

,2001 **Modelling Global Change** Marco Janssen,1998 Integrated assessment modelling is an active and rapidly developing field triggered by the debate on climate change and the move towards the goal of sustainable development This book provides an integrated approach to modelling using a transdisciplinary approach The author summarizes the main issues involved in the changing global system and gives an overview of the emerging field of integrated assessment He then presents a general discussion of the methodological principles of a multidisciplinary integrated modelling approach Existing tools are examined and new methodological approaches are applied to various aspects of the problem of global change The case studies focus on optimizing climate change mitigating policies the allocation of emission rights and the the adaptive behaviour of social and biological agents Special attention is given to the role of uncertainty especially the subjective interpretation of uncertainties world views and the role of adaptive multi agent modelling The book concludes with a discussion on future uses of integrated assessment modelling in the global environment Modelling Global Changewill be vital to economists and scientists who have an interest in integrated assessment modelling global modelling and decision support environmental and ecological economists and those interested in sustainable development **Agrekon** ,2003
