Models Of Language

Peter Broeder,Jaap Murre

Models Of Language:

Usage-based Models of Language Michael Barlow, Suzanne Kemmer, 2000-01 How do humans learn how to speak and understand language For years linguists have developed numerous models in attempts to explain humans ability to communicate through language Historically these approaches were rooted and restricted in rule based linguistic representations Only recently has the field of linguistics been willing to forego formal representations and models to accommodate the usage based perspective of studying language Deviating from traditional methods the contributions presented in this volume are among the first works to approach linguistic theory by developing and utilizing usage based models The contributing authors were among the principal leaders in their fields to leave behind rule based linguistic representations in favor of constraint based systems whose structural properties actually emerge from usage The volume begins with an introductory chapter that defines contributors interpretations of usage based models and theories of language The reason for the shift from formal linguistic theories to the gradual acceptance of usage based models is also examined Using methods such as Cognitive Grammar the Lexical Network Model Competition Model Relational Network Theory and Accessibility Theory the selected works demonstrate how usage based models evince far greater cognitive and neurological plausibility than algorithmic generative models

Computational Modeling of Human Language Acquisition Afra Alishahi, 2010-10-10 Human language acquisition has been studied for centuries but using computational modeling for such studies is a relatively recent trend However computational approaches to language learning have become increasingly popular mainly due to advances in developing machine learning techniques and the availability of vast collections of experimental data on child language learning and child adult interaction Many of the existing computational models attempt to study the complex task of learning a language under cognitive plausibility criteria such as memory and processing limitations that humans face and to explain the developmental stages observed in children By simulating the process of child language learning computational models can show us which linguistic representations are learnable from the input that children have access to and which mechanisms yield the same patterns of behaviour that children exhibit during this process In doing so computational modeling provides insight into the plausible mechanisms involved in human language acquisition and inspires the development of better language models and techniques This book provides an overview of the main research questions in the field of human language acquisition It reviews the most commonly used computational frameworks methodologies and resources for modeling child language learning and the evaluation techniques used for assessing these computational models The book is aimed at cognitive scientists who want to become familiar with the available computational methods for investigating problems related to human language acquisition as well as computational linguists who are interested in applying their skills to the study of child language acquisition Different aspects of language learning are discussed in separate chapters including the acquisition of the individual words the general regularities which govern

word and sentence form and the associations between form and meaning For each of these aspects the challenges of the task are discussed and the relevant empirical findings on children are summarized Furthermore the existing computational models that attempt to simulate the task under study are reviewed and a number of case studies are presented Table of Contents Overview Computational Models of Language Learning Learning Words Putting Words Together Form Meaning Associations Final Thoughts *Models of Language Use and Language Learning in the Theory of Language Didactics* Maria Dakowska,1996 *Neural Models of language Processes* Michael Arbib,2012-12-02 Neural Models of Language Processes offers an interdisciplinary approach to understanding the nature of human language and the means whereby we use it The book is organized into five parts Part I provides an opening framework that addresses three tasks to place neurolinguistics in current perspective to provide two case studies of aphasia and to discuss the rules of the game of the various disciplines that contribute to this volume Part II on artificial intelligence AI and processing models discusses the contribution of AI to neurolinguistics The chapters in this section introduce three AI systems for language perception the HWIM and HEARSAY systems that proceed from an acoustic input to a semantic interpretation of the utterance it represents and Marcus9 system for parsing sentences presented in text Studying these systems demonstrates the virtues of implemented or implementable models Part III on linguistic and psycholinguistic perspectives includes studies such as nonaphasic language behavior and the linguistics and psycholinguistics of sign language Part IV examines neurological perspectives such as the neuropathological basis of Broca's aphasia and the simulation of speech production without a computer Part V on neuroscience and brain theory includes studies such as the histology architectonics and asymmetry of language areas hierarchy and evolution in neurolinguistics and perceptual motor processes and the neural basis of language **Models of Language Acquisition** Peter Broeder,Jaap Murre,2000 This book presents recent advances by leading researchers in computational modelling of language acquisition The contributors have been drawn from departments of linguistics cognitive science psychology and computer science They show what light can be thrown on fundamental problems when powerful computational techniques are combined with real data The book considers the extent to which linguistic structure is readily available in the environment the degree to which language learning is inductive or deductive and the power of different modelling formalisms for different problems and approaches It will appeal to linguists psychologists cognitive scientists working in language acquisition and to those involved in computational modelling in linguistic and behavioral science

Modern Language Models and Computation Alexander Meduna,Ondřej

Soukup,2017-10-04 This textbook gives a systematized and compact summary providing the most essential types of modern models for languages and computation together with their properties and applications Most of these models properly reflect and formalize current computational methods based on parallelism distribution and cooperation covered in this book As a result it allows the user to develop study and improve these methods very effectively This textbook also represents the first systematic treatment of modern language models for computation It covers all essential theoretical topics concerning them From a practical viewpoint it describes various concepts methods algorithms techniques and software units based upon these models Based upon them it describes several applications in biology linguistics and computer science Advanced level

students studying computer science mathematics linguistics and biology will find this textbook a valuable resource Theoreticians practitioners and researchers working in today's theory of computation and its applications will also find this book essential as a reference ***Cultural Models in Language and Thought*** Dorothy Holland, Naomi Quinn, 1991 **Cultural Models in Language and Thought** Dorothy C. Hands-On Large Language Models Jay Alammar, Maarten

Grootendorst, 2024-09-11 AI has acquired startling new language capabilities in just the past few years. Driven by the rapid advances in deep learning, language AI systems are able to write and understand text better than ever before. This trend enables the rise of new features, products, and entire industries. With this book, Python developers will learn the practical tools and concepts they need to use these capabilities today. You'll learn how to use the power of pre-trained large language models for use cases like copywriting and summarization, create semantic search systems that go beyond keyword matching, build systems that classify and cluster text to enable scalable understanding of large amounts of text documents, and use existing libraries and pre-trained models for text classification, search, and clusterings. This book also shows you how to build advanced LLM pipelines to cluster text documents and explore the topics they belong to. Build semantic search engines that go beyond keyword search with methods like dense retrieval and rerankers. Learn various use cases where these models can provide value. Understand the architecture of underlying Transformer models like BERT and GPT. Get a deeper understanding of how LLMs are trained. Understanding how different methods of fine-tuning optimize LLMs for specific applications.

generative model fine-tuning, contrastive fine-tuning, in-context learning, etc. **Advances in Information Retrieval Theory** Giambattista Amati, Fabio Crestani, 2011-09-01 This book constitutes the refereed proceedings of the Third International Conference on the Theory of Information Retrieval (ICTIR 2011) held in Bertinoro, Italy, in September 2011. The 25 revised full papers and 13 short papers presented together with the abstracts of two invited talks were carefully reviewed and selected from 65 submissions. The papers cover topics ranging from query expansion, co-occurrence analysis, user and interactive modelling, system performance prediction and comparison, and probabilistic approaches for ranking and modelling IR, to topics related to interdisciplinary approaches or applications. They are organized into the following topical sections: predicting query performance, latent semantic analysis and word co-occurrence analysis, query expansion and re-ranking, comparison of information retrieval systems and approximate search, probability ranking principle and alternatives, interdisciplinary approaches, user and relevance, result diversification and query disambiguation, and logical operators and descriptive approaches.

Cognitive Modelling in Language and Discourse across Cultures Annalisa Baicchi, Erica Pinelli, 2017-08-21 This volume deals with core issues in figurative language and figurative thought. It also explores areas of convergence between idealised cognitive models and language across fourteen European and non-European languages: Croatian, English, German, Greek, Italian, Japanese, Persian, Polish, Russian, Old Saxon, Sicilian, Spanish, Swedish, and Turkish. The

collection foregrounds the relationship that holds between literalness and figurativeness in meaning construction it emphasises the role of conceptual metonymy and metaphor as the main cognitive tools at work in inferential activity and as generators of discourse ties and it also depicts the import of cognitive models in the production and interpretation of multimodal communication In addition a number of more specific topics are addressed from different perspectives such as language variation and cultural models the argumentative role of metaphor in discourse and the role of empirical work in cognitive linguistics

Formal Models in the Study of Language Joanna Blochowiak,Cristina Grisot,Stephanie Durrleman,Christopher Laenzlinger,2017-03-20 This volume presents articles that focus on the application of formal models in the study of language in a variety of innovative ways and is dedicated to Jacques Moeschler professor at University of Geneva to mark the occasion of his 60th birthday The contributions by seasoned and budding linguists of all different linguistic backgrounds reflect Jacques Moeschler s diverse and visionary research over the years The book contains three parts The first part shows how different formal models can be applied to the analysis of such diverse problems as the syntax semantics and pragmatics of tense aspect and deictic expressions syntax and pragmatics of quantifiers and semantics and pragmatics of connectives and negation The second part presents the application of formal models to the treatment of cognitive issues related to the use of language and in particular demonstrating cognitive accounts of different types of human interactions the context in utterance interpretation salience inferential comprehension processes figurative uses of language irony pretence the role of syntax in Theory of Mind in autism and the analysis of the aesthetics of nature Finally the third part addresses computational and corpus based approaches to natural language for investigating language variation language universals and discourse related issues This volume will be of great interest to syntacticians pragmaticians computer scientists semanticists and psycholinguists

Language Modeling for Information Retrieval W. Bruce Croft,John Lafferty,2013-04-17 A statisticallanguage model or more simply a language model is a probabilistic mechanism for generating text Such a definition is general enough to include an endless variety of schemes However a distinction should be made between generative models which can in principle be used to synthesize artificial text and discriminative techniques to classify text into predefined categories The first statisticallanguage modeler was Claude Shannon In exploring the application of his newly founded theory of information to human language Shannon considered language as a statistical source and measured how well simple n gram models predicted or equivalently compressed natural text To do this he estimated the entropy of English through experiments with human subjects and also estimated the cross entropy of the n gram models on natural text The ability of language models to be quantitatively evaluated in this way is one of their important virtues Of course estimating the true entropy of language is an elusive goal aiming at many moving targets since

language is so varied and evolves so quickly Yet fifty years after Shannon's study language models remain by all measures far from the Shannon entropy limit in terms of their predictive power However this has not kept them from being useful for a variety of text processing tasks and moreover can be viewed as encouragement that there is still great room for improvement in statistical language modeling
